

9124523 SERVICE MANUAL MODULAR CONVENIENCE COUNTER MCC HOT EU

- NOTICE -

This service manual is prepared to be used by trained Service Technicians and should not be used by those not properly qualified. If you have attended a training for this product, you may be qualified to Perform all repair procedures, replacements and adjustments described in this service manual.

The information presented in this document is only valid for standard hot and cold modular convenience counters, (MCC) configurations and is not intended to be all encompassing. The individual specifications may differ.

Procedures for which you do not have the necessary tools, instruments or skills should not be performed by you.

Technical data and specifications mentioned in this manual are subject to amendment without prior notice.

**Reproduction of this service manual,
Without the express written consent of Fri-Jado,
Is prohibited.**

1.0 Introduction

1.1 General

This manual is intended for trained technicians, performing repairs on the MDD
 The features and controls are being described, along with directions for the safest and most efficient way to service these counters.
 All pictograms, symbols and drawings in this manual apply to all available MDD models.

1.2 Identification of the unit

The identification plate can be found on the outside of the machine, and contains the following data:

- Name of the supplier or the manufacturer
- Serial number
- Voltage
- Power consumption
- Model
- Year of construction
- Frequency

1.3 Pictograms and symbols

In this manual, the following pictograms and symbols are used:

WARNING symbols:

WARNING

Possible physical injury or serious damage to the unit,

WARNING

Risk of Fire.

WARNING

Hazardous electrical voltage.

WARNING

Danger of getting injured by hot surfaces.

SAFETY symbols:

SAFETY

Wear safety gloves for installation and dismantling.

SAFETY

Wear eye protection.

SAFETY

ALWAYS Remove power plug from main outlet before working on the unit.

Disposal

According local regulations

1.4.1 General regulations

The technician, working on the unit will be fully responsible for abiding the locally prevailing safety rules and regulations.

Technical activities must be performed by qualified and authorized persons only.

Before working on any electrical part, or dismantling the unit by means of using a screwdriver, **ALWAYS REMOVE** the power plug from the main outlet.

Anyone performing technical repairs, replacements or adjustments on or with this unit must be familiar with the contents of this service manual and carefully follow all guidelines and instructions.

Never change the order of the steps to be performed.

The pictograms, labels, instructions and warning signs attached to the unit, are part of the safety measures. They may never be covered or removed, and have to be clearly visible during the entire lifetime of the unit.

Immediately repair or replace damaged or illegible pictograms, warnings and instructions.

Notes:

- To avoid short-circuiting, never clean the unit using a water hose.
For detailed cleaning instructions, please refer to MCC user manual.

- The shelves, glass and back of the hot unit can get hot.

- All units must be cleaned regularly to ensure proper functioning.

- Do not store explosive substances;
such as aerosol cans with flammable propellant in this appliance.

1.4.2 Moving

- Before moving the unit, first switch off the mains switch and disconnect power by pulling the plug from the wall socket.
- Remove pans containing a liquid product from the unit.
- Always keep the unit in upright position.

1.4.3 Outdoor use restrictions

WARNING

To avoid short-circuiting, the units may not be used outdoors nor in a rainy or very moist environment.

1.5 Hygiene

WARNING

Immediately remove products in damaged packaging from the equipment and destroy the products.

Clean all components that have come in contact with products from damaged Packaging.

The quality of a fresh product always depends on hygiene.
It is essential that products are packaged immediately after preparation.

Prevent fresh raw vegetables or already prepared, cooled products from coming into contact with raw meat products to avoid transmitting salmonella.

First thoroughly clean hands and/or tools that have touched raw meat and/or meat juices.

For detailed cleaning instructions, please refer to MCC user manual section 5.

1.6

Service and technical support

The electrical schematics of the unit are included at the end of this manual.
In case of malfunctions which are not fixable by you, you can contact Fri-Jado.
Make sure you have the following data available:

- Model.
- Serial number.

This data can be found on the identification plate.

1.7

Storage

If the unit will not be used temporarily, and will be stored, follow these instructions:

- Clean the unit thoroughly.
- Wrap the unit from getting dusty.
- Store the unit in a dry, non-condensing environment.
- Ensure good ventilation.

1.8 Disposal

Dispose of the machine, any components or lubricants removed from it safely in accordance with all local and national safety and environment requirements.

2.0 Detailed description

2.1 Technical description Self Serve

Panels are made of galvanized steel plating, stainless steel and/or aluminum.
Some of the visible internal and external parts have been provided with a powder coating.
Glass used is tempered.
Unit can be moved by means of a pallet truck.

Product contact parts are made of stainless steel AISI 304 or AISI 430 and tempered glass.

2.2 Hot units Self Serve: (Patented Hot Blanket Holding technology)

Heating in hot self-serve units is achieved by means of heated shelves in combination with an hot-air curtain per shelf. This air curtain isolates the hot air inside the unit from the ambient air.

Hot serve over units have a single heat source in the base of each shelf and use fans to distribute the heat throughout the cabinet.

An electronic thermostat controls the temperature.
The electronic thermostat has been pre-set at the factory.

This value can be changed for self-serve models between 40 °C and 70 °C (104 °F and 158 °F) and for serve over models between 40 °C and 85 °C (104 °F and 185 °F).

One LED-module per level provides lighting of the products.
The LED-lighting and the heating are switched on and off separately, In the future Lightning and heating can be switched on simultaneously.

Hot Air flow Self Serve

2.3 Intended use

Self-serve models have been designed solely to keep packaged products warm and to display them.

Serve over models (Full Serve) can be used for unpacked foodstuff as well.

Any other use will not be regarded as intended use.

The manufacturer accepts no liability whatsoever for loss or injury caused by failing to strictly adhere to the safety guidelines and instructions in this manual and the user manual or due to carelessness during installation, use, maintenance and repair of the unit referred to in this manual and any of its Accessories.

Use the unit in perfect technical condition only.

2.4 Technical description Full Serve Hot Humidified

The MCC Hot FS is a multilevel serve over heated display cabinet intended for hot presentation of food products.

A heating element and an array of fans are located in the base of the unit and circulate hot air throughout the cabinet, creating uniform holding conditions.

Any air in- and outlet openings should be kept clear. A digital controller is installed to regulate the temperature inside the cabinet.

A water tray is present underneath the base deck which can be used to increase the humidity levels inside the cabinet, hereby increasing the shelf life of delicate products.

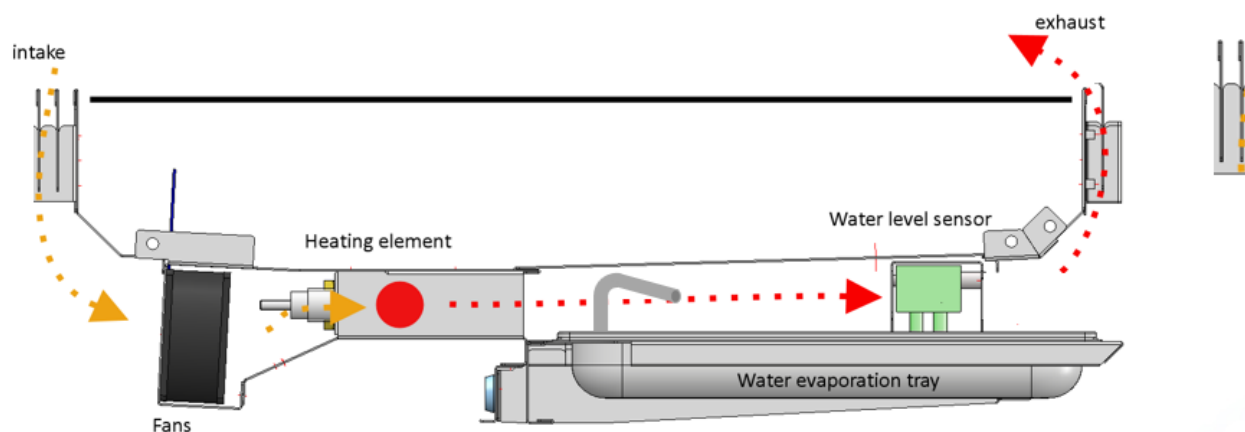

To make sure the cabinet is installed, operated and serviced in a safe manner, the instructions provided by the manufacturer should be adhered to at all times.

The cabinets can also be supplied with or without under frame to be installed into an existing counter top.

Heating in hot full-serve units is achieved by means of a heating element in combination with hot-air blowers. The blower fans suck air on the intake side, blowing this air along the heating element causes the air to heat up.

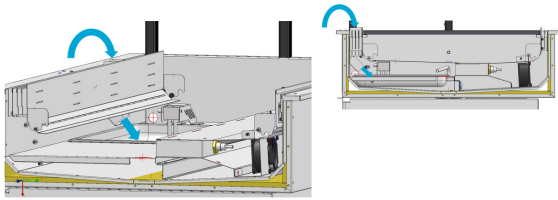

To prevent products from drying, humidification is applied by means of a water tray underneath the hot air flow. Hot air holds more moisture. The moist hot air is blown into the unit, creating a higher humidity inside the “closed” unit.

Serve over models can be fitted with an optional humidification system in the form of a passive water tray.

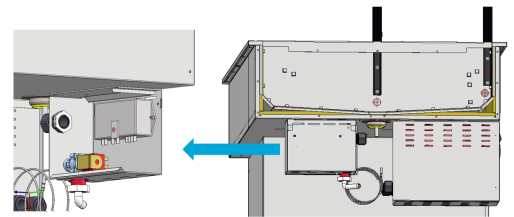

Filling of the water tray can be done either by hand, or automatically.
For the automatic filling system, an additional electrical box is implemented which controls the filling process.

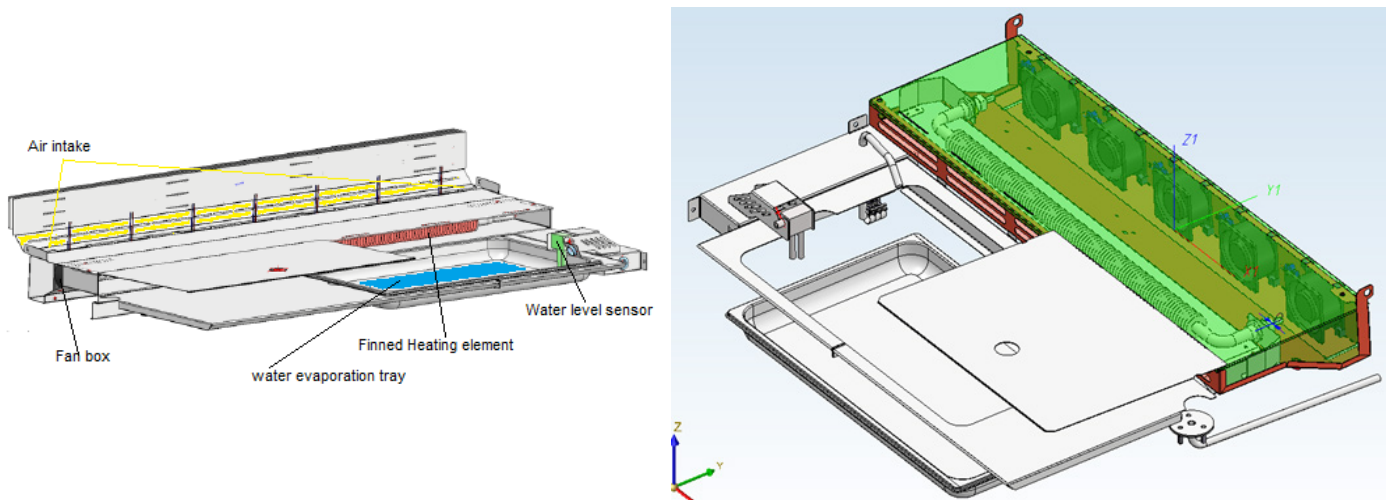

Hand filling system

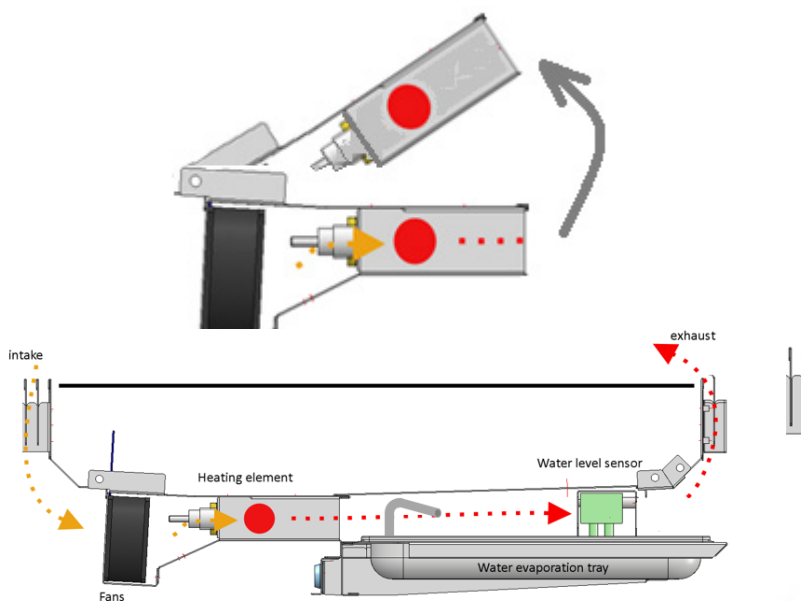

Automatic filling system

Hot air flow Full Serve

3.0 Unpacking

3.0 Start to unpack

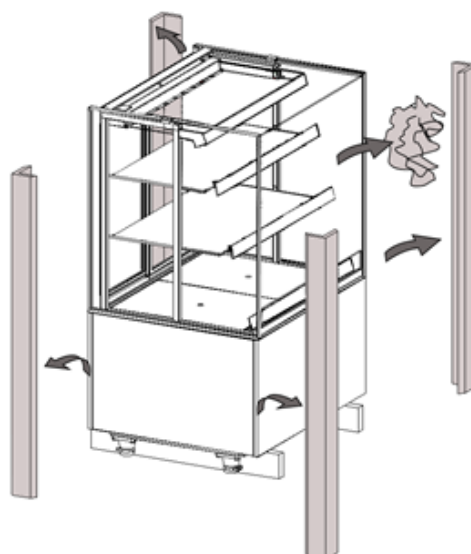

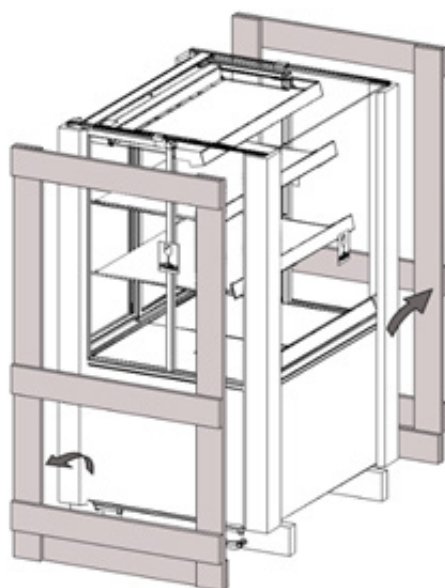

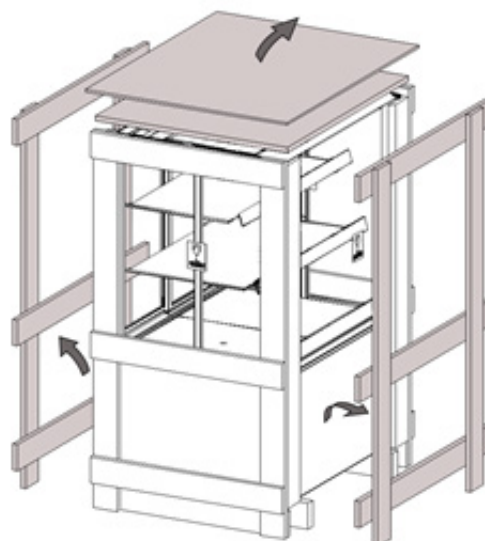

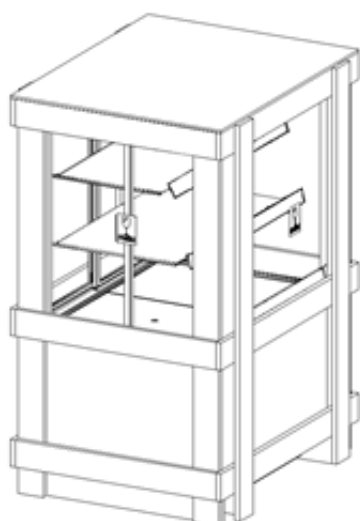

All packing materials used for this unit are suited for recycling.

Before and during unpacking, check the state of the unit. In case of damage, photograph the damage, store the packing material, and contact the transporter as soon as possible but at the latest within fifteen working days after receiving the goods.

3.0.1 Unpacking the unit

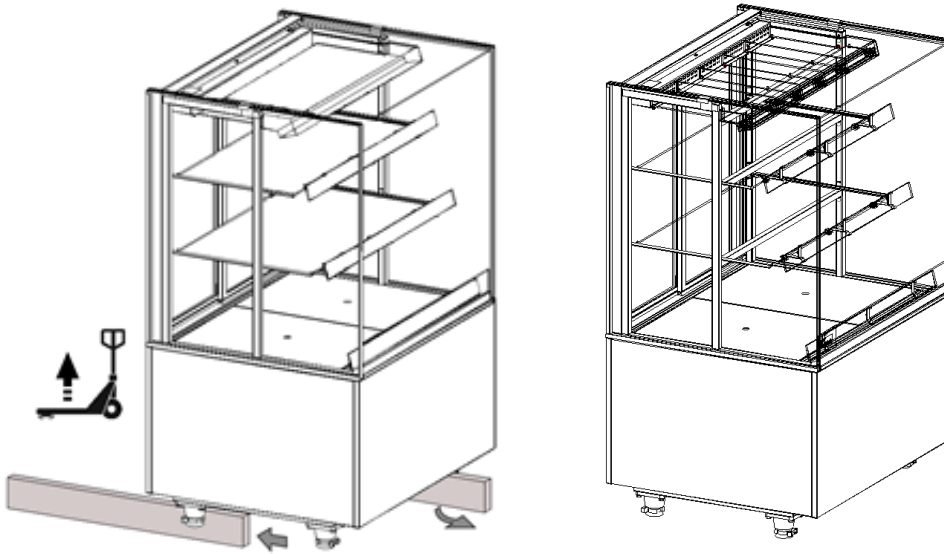

The MCC is placed inside a crate during transport, take the following steps to unpack.

1. Remove the top crate pane and foam.
2. Remove the front and rear boards.
3. Remove both side boards.
4. Lift the unit from the support beams using a pallet truck or forklift.
5. Remove the supporting beams.
6. Observe the safety and warning signs.

Refer to User manual for complete installation procedure

4.0 Installation

4.0.0 Installation and positioning

WARNING

Position the unit on a flat and horizontal surface.

A temporally inclined plane of maximum 5° is allowed.

- Place the unit level on a sufficiently sturdy floor.
- Keep the weight of the unit in mind.
- Use a level-ling instrument to level the unit by adjusting the unit's legs.
- Be sure that the personnel have sufficient room to work with the unit.
- Keep a distance of at least 150 mm (6 inch) between the back wall and the unit.
- Do not position a unit near a doorway, a ventilation device or a refrigerator in order to avoid any negative effects on the unit's operation by a cold airflow.

The unit is designed for a maximum draft of 0.2 m/s (0.65 ft./sec).

- Do not place the unit into direct sunlight.
- Hot units should not be used below 20 °C (68 °F) ambient temperatures. and a relative air humidity remains below 60%.
- Keep the plinth free from any obstacles to ensure ventilation.

Hot Unit

The unit is set at 65 °C (149 °F) intake air temperature for the self-service models, and 80 °C (176 °F) for the serve over model.

If required this temperature can be adjusted to some degree.

At a ambient temperature of 20 °C (68 °F) and an initial core temperature of 85 °C (185 °F) these factory settings of the unit's temperature ensure a constant core temperature of at least 63 °C (145.5 °F) for 4 hours.

Switching-on the unit:

- Switch the heating on.
- Preheat the unit for approx. 30 minutes.
- Switch on the lighting.

Loading the unit:

- Only place products that have a core temperature of at least 85 °C (185 °F).
- Only package the hot products in bags or containers that are suitable for this purpose.
- To ensure a good contact with the heated trays, only place a single layer of products.
- The maximum loading height is 50mm (2 inch) below the bottom of the shelf/air guide above.
- The maximum carrying-capacity per shelf is 30 kg/m (66 lbs/m), by equal load.

Warning Electrical shock Hazard

- Grounding instructions:
Only connect the appliance to an alternating current, to a grounded wall socket, with a mains voltage in accordance with the information indicated on the type plate of the appliance.
- It is the consumer's responsibility to make sure the electrical installation conforms with current national and local codes and wiring regulations.
- It is not allowed to use a multi plug or extension cord. Such can result in fire, electrical shock, or personal injury.

Failure to follow these instructions can result in serious injury or in death.

4.1 Applying price rail

Optional price rails for Hot self-serve models can be mounted using the front screws underneath each of the Hot SS shelves. Do not loosen this screws entirely!

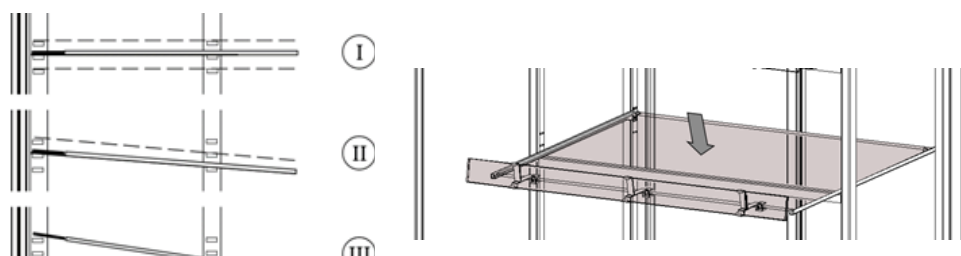

Price rails for serve over models can be mounted on the air inlet grill and on the glass shelves.

4.2 Repositioning the glass shelves on Hot FS models

The glass shelves can be positioned at three horizontal levels (I), or one of three angled positions (II and III) by changing the positions of the LED-armature with respect to the rear.

Examples:

For repositioning details refer to User manual

4.3 Hot SS models

The shelves can be positioned at two angled positions (0° and 3°). Refer to user manual.

Hot FS models

Water connection for automatic fill, Refer to user manual 3.6.1
Water Manually fill, Refer to user manual 3.6.2

Unit	GN tray size	Max. reservoir water level	Reservoir water level when alarm activates	Max. water volume to add (only when alarm is on!)
MCC-60 H FS	GN 1/2 40mm	2,5L (0.66 gallon)	0,75L (0.19 gallon)	1,75L (0.46 gallon)
MCC-90 H FS	GN 1/1 40mm	5L (1.32 gallon)	1,5L (0.39 gallon)	3,5L (0.92 gallon)
MCC-120 H FS	GN 1/1 40mm	5L (1.32 gallon)	1,5L (0.39 gallon)	3,5L (0.92 gallon)

4.4 Plateau Options

On all MCC models, except the MCC Hot SS, the bottom presentation deck can be set at a variety of horizontal levels.

Refer to user manual

4.5 Solid back option

On request the unit can be ordered having a solid back in stead of sliding doors

4.6 First use

Before starting to use the unit, clean the inside thoroughly with a mild detergent and water. After cleaning it wipe it with a cloth moistened with clean water to remove residual detergent, then dry the entire unit.

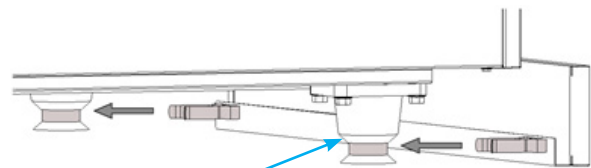

4.7 Level the unit

Place the unit on a sturdy, flat surface and level the unit by adjusting the unit's legs (max.15mm).

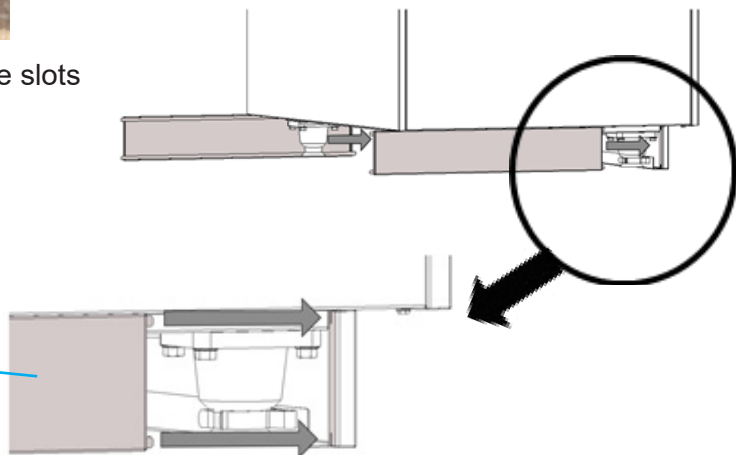

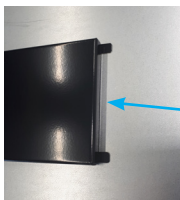

4.8 Mounting the plinths

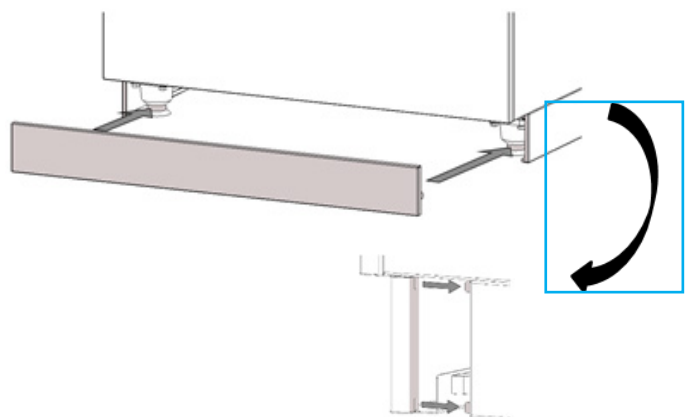

Place the rear plinth by attaching it to both rear Adjustable legs using its two clamps.

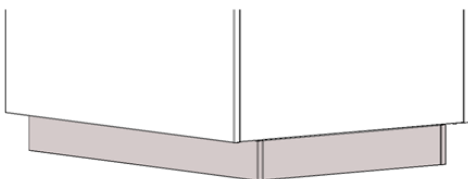

Insert the pegs of both side plinths into the slots of the rear plinth.

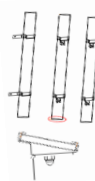

Secure the side plinths by inserting the pegs into the slots of the front plinth, while clamping the front plinth to the front adjustable legs.

5.0 MCC Drop-in

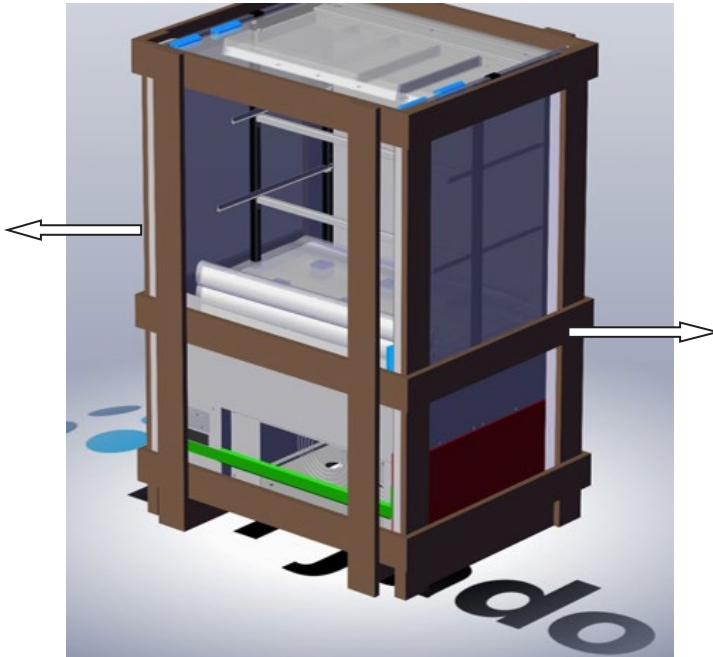

The MCC Drop in will be delivered, packed in a crate

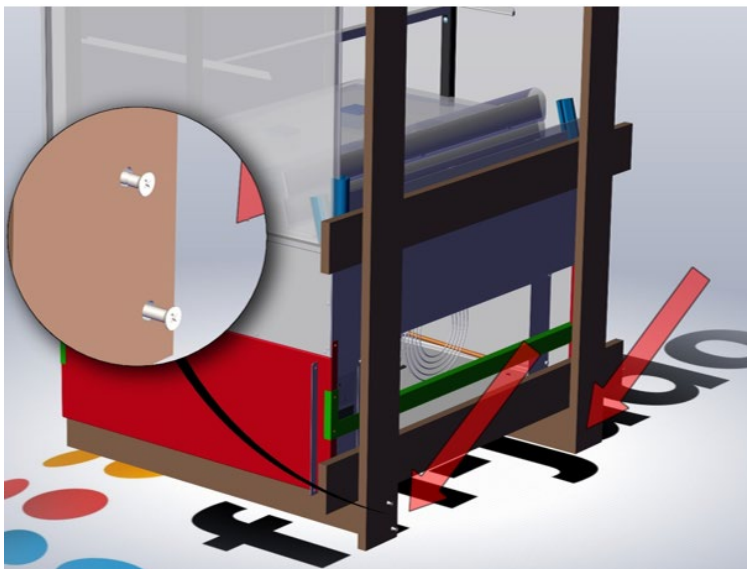

Start unpacking by removing top cover

Remove short sides first (Left and Right), by unscrewing them.

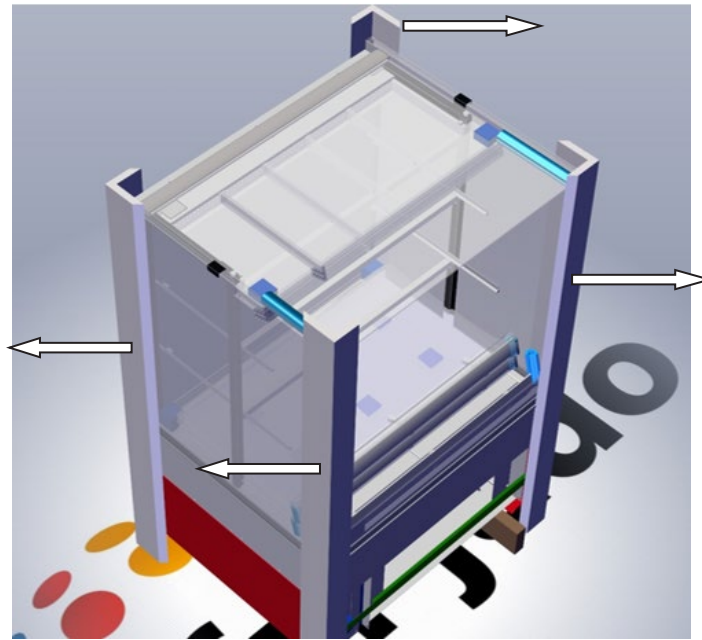

Next, remove front and back panel, they are also screwed onto the support beams under the unit.

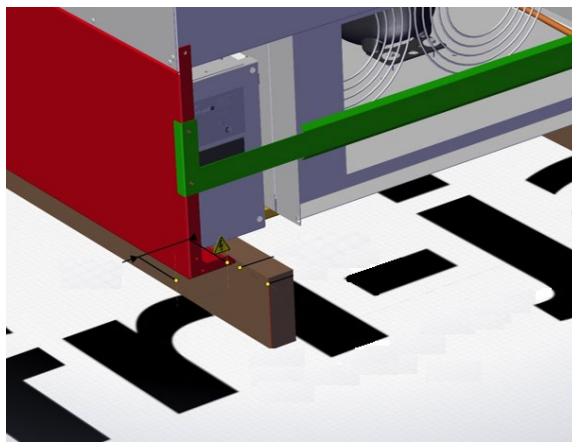

Keep the support beams for further use.

Remove wrapping foil and remove corner pieces EPS foam.

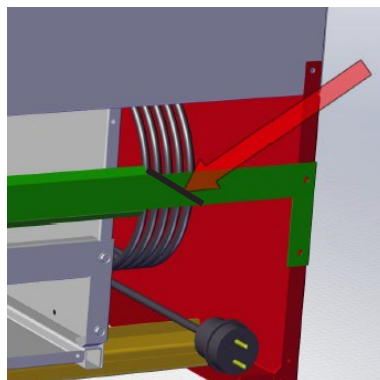

Unit is placed on a metal sub frame for transport purposes. Frame is kept together with metal strip at the front and the back.

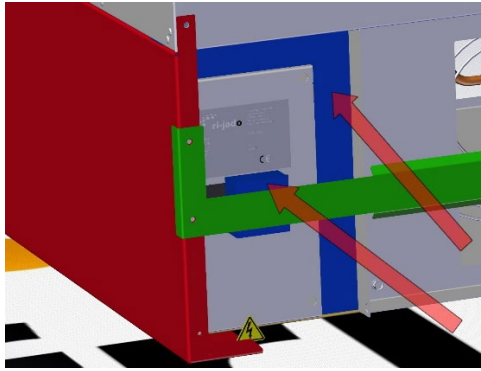

Keep strip in place during placing process. Keep wooden support beams for further usage.

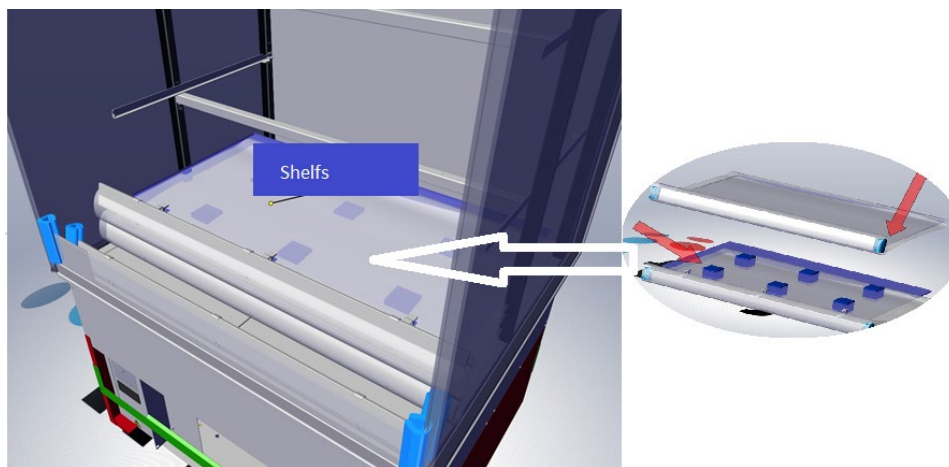

After lowering the cabinet into the cut-out in the counter top:
Remove tie-wrap which is holding the power cord.

Remove foam which holds the electrical box

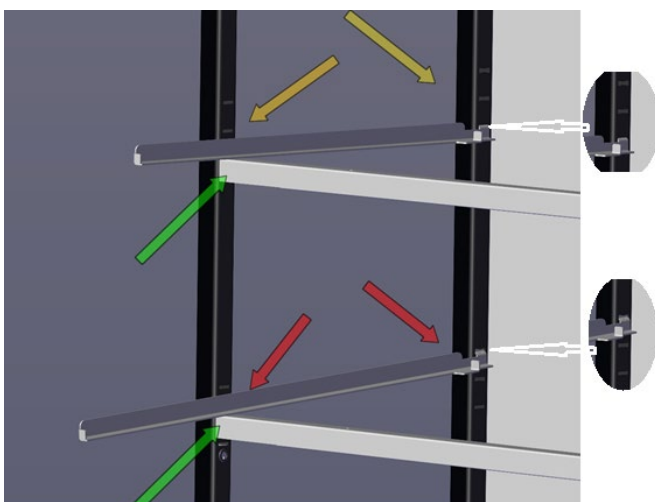

Remove documents and glass shelves from unit.

After placing cabinet in final position, remove tie-wraps which hold the shelf holders.

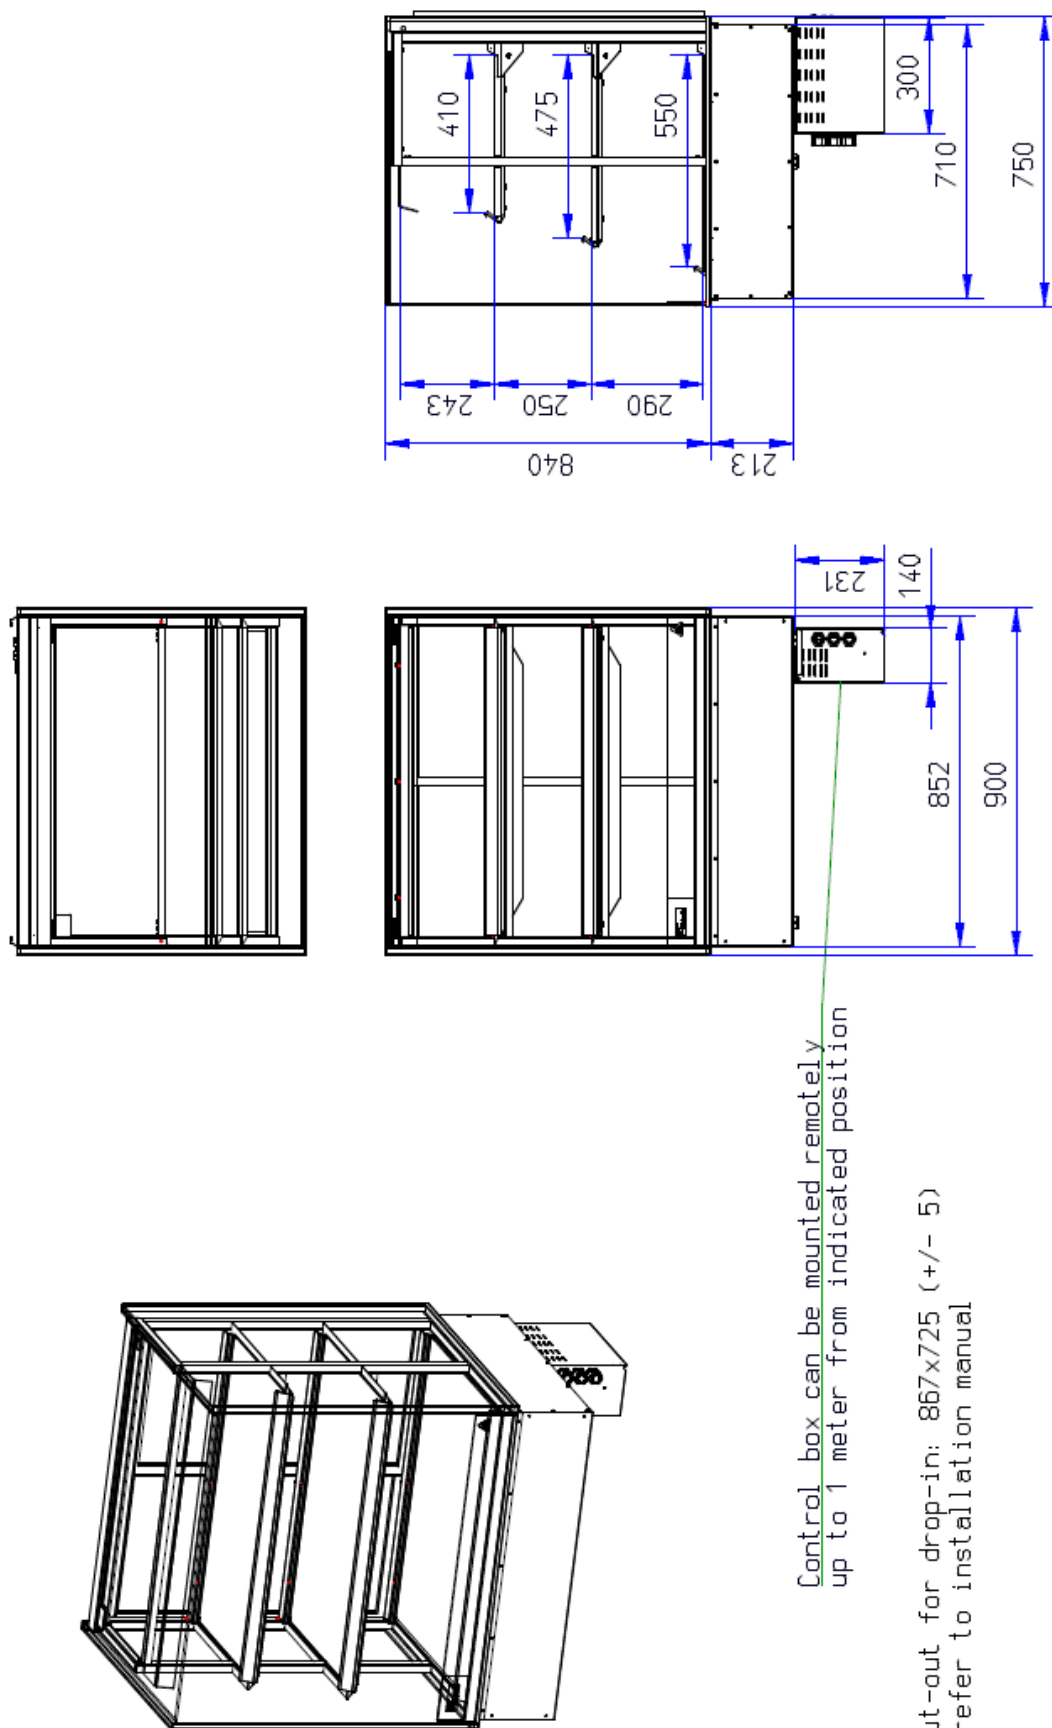

Make sure the shelf holders are placed in the required sleeve, for the wanted angled or straight position of the shelves.

Shelf rails of top shelf should be placed in lowest position.

Shelf rails of middle shelf should be placed in highest position

5.1 MCC 90 Drop-in Dimensions Self Serve (For reference)

5.2 MCC Hot Drop-in Requirements

Important remark before installation:

When installing Front Doors on the drop in unit,
Please follow Front door installation procedure, until the step in which the glass is put in.

Placing the doors in a later stage, means the unit must be lifted again.

Installation must comply with:

- Make sure the counter is still easily accessible for service after installation by means of a removable hatch.
- Provide enough space to place the counter with a stacker.
- Maintain the dimensions and minimum requirements as indicated in the installation manual.
- Provide adequate ventilation; keep the minimum air inlet and outlet opening as indicated.
- Make sure the room/shop[in which the counter is placed meets the minimum dimensions as indicated in the installation manual.
- All warning signs/labels, minimum floor area label and data plate must remain visible after installation.
- Operation of the appliance must be accessible.

5.4 MCC Drop-in Installation

Doc. nr. 9124589	Rev. 0	Registration form. MCC Drop in installation instruction	
----------------------------	------------------	---	---

Safety instructions

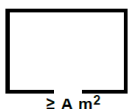

WARNING

Self-contained units: Risk of Fire or explosion. Flammable refrigerant used.

WARNING

The maximum load on top of the unit may never exceed 10 kg.

MINIMUM ROOM FLOOR AREA

Self-contained units: Refer to the data label on the unit for the required floor area.

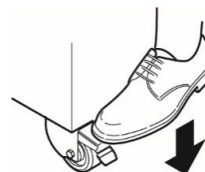

WARNING

See installation instructions for grounding requirements.

WARNING

Always use the brakes on both front wheels when applicable:

Cold units with remote CO2 (R744) refrigerant

WARNING

Remote R744 refrigerant is environmentally friendly but under high pressure. It is non-toxic with zero Ozone Depletion Potential (ODP) and very low Global Warming Potential (GWP).

Read this manual carefully and follow all precautions described herein.

SAFETY

Wear eye protection when working on the refrigeration system.

WARNING

Remote R744 filled under high pressure.(max. 60 bar)

- Do not tamper with the system.
- The system must be installed and maintained by qualified persons only.
- Fixate the unit to the floor.
- The ventilation openings of the cladding of the unit (including accessories) must not be blocked or covered. Ensure that the air circulation remain unobstructed.

MCC Hot version:

Important remark before installation:

When installing Front doors on the drop in unit, Please follow Front door installation procedure 9124652 or 9124721 depending on version, until the step in which the glass must be placed.

Placing the doors in a later stage, means the unit must be lifted again.

Installation must comply with:

- Make sure that the furniture is still easily accessible for service after installation by means of a removable hatch.
- Provide enough space to place the furniture with a stacker.
Maintain the dimensions and minimum height as indicated in the installation manual.
- Provide adequate ventilation; keep the minimum air inlet and outlet opening as indicated on the last page.
- Make sure that the room / shop in which the furniture is placed meets the minimum dimensions as indicated in the installation manual.
- All warning signs / labels, minimum floor area label and Data plate must remain visible after installation.
- Operation of the appliance must be accessible.

Doc. nr. 9124589	Rev. 0	Registration form. MCC Drop in installation instruction	
----------------------------	------------------	---	---

MCC Cold version:

Important remark before installation:

When installing Front doors on the drop in unit, Please follow Front door installation procedure 9124652 or 9124721 depending on version, until the step in which the glass is put in.

Placing the doors in a later stage, means the unit must be lifted again.

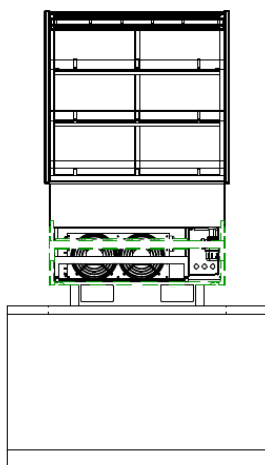

Installation must comply with:

- No spark-forming components or components with a high surface temperature may be present in the substructure / counter where the furniture is placed.
- The refrigeration components must not be directly accessible by unauthorized Personnel.
- Make sure that the furniture is still easily accessible for service after installation by means of a removable hatch. The condenser must be cleaned regularly.

Keep enough space on the back of the unit, to enable servicing which implies the back panel of the furniture can be removed.

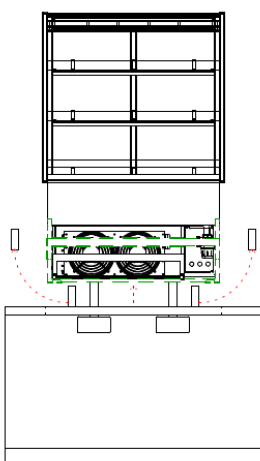

- Provide enough space to place the furniture with a stacker.
Maintain the dimensions and minimum height as indicated in the installation manual.
- Provide adequate ventilation; keep the minimum air inlet and outlet opening as indicated in the installation manual. Place baffles to prevent hot exhaust air from being sucked back through the condenser.
- Make sure that the room / shop in which the furniture is placed meets the minimum dimensions as indicated in the installation manual.
- Make sure that the warning signs / labels are / remain visible after installation.
- Operation of the appliance must be accessible.
- Additional ventilation: prevent gas accumulation due to leakage. Used gas is heavier then air.
- Avoid high temperatures in the vicinity of the furniture.

Doc. nr. 9124589	Rev. 0	Registration form. MCC Drop in installation instruction	 fri-jado
----------------------------	------------------	---	---

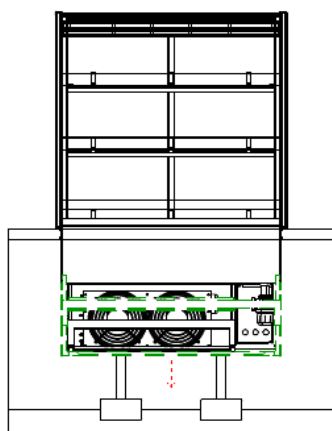

Step 1.

Position the cabinet above the cut-out in the counter top with a forklift and support it using the wooden beams supplied with the unit

Step 2.

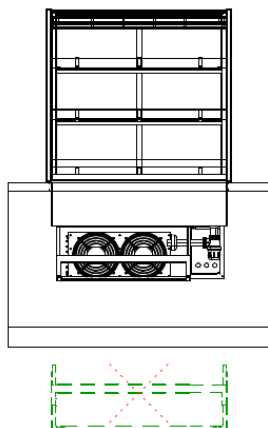

Lift the cabinet from below, using stable filler blocks and remove the wooden support beams

Step 3.

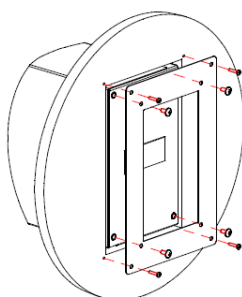

Apply sealant or a thin flexible foam seal around the cut-out in the countertop. Carefully lower the cabinet into the counter

Doc. nr. 9124589	Rev. 0	Registration form. MCC Drop in installation instruction	
----------------------------	------------------	---	---

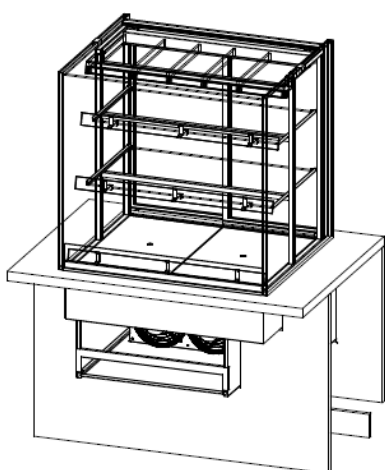

Step 4.

Remove and discard the metal transportation frame.

Step 5.

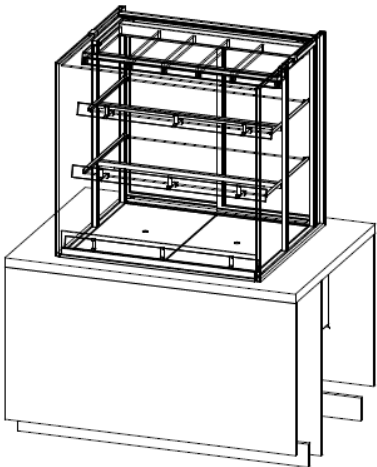

Install the control panel using the supplied mounting plate and screws. (up to 1 meter from the original position)

Step 6.

Install a partition panel to prevent recirculation of hot condenser air. (refrigerated models only)

Doc. nr. 9124589	Rev. 0	Registration form. MCC Drop in installation instruction	
----------------------------	------------------	---	---

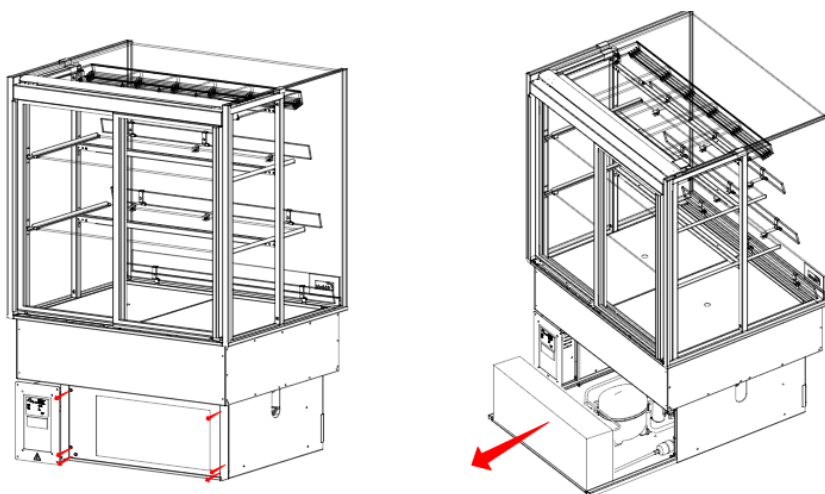

Step 7.

Install all remaining trim panels. Make sure ventilation openings have the correct size and the cabinet remains accessible for service and maintenance.

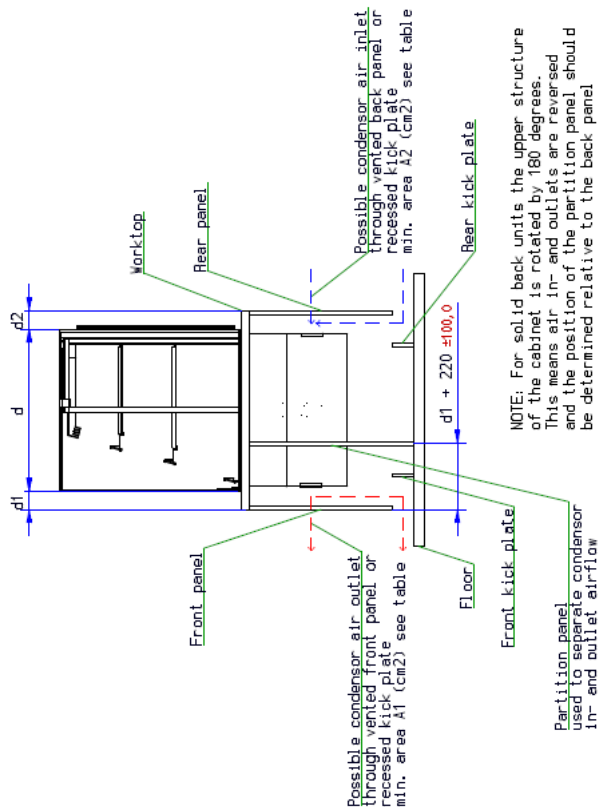

Make sure, after build in, the condensing unit is still accessible.

Keep in mind the complete condensing unit is extendable on self-contained units, at the back side of the unit for maintenance and service purposes.

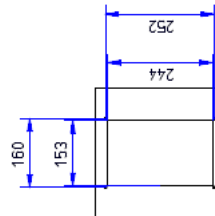

For remote units, please keep latch for service.

6.0 Installation Front door section (first version)

	<p>Step 1.</p> <p>Remove any remaining protective coatings from the stainless steel parts provided.</p>
 <p>Place soft close damper</p>	<p>Step 2.</p> <p>Depending on variant:</p> <p>With standard underframe: Remove front underframe panel (two screws, one on each bottom corner).</p> <p>Drop-In: Raise the unit at least 30cm from tabletop level in order to access the screws for the child-guard. Be careful to support the unit such that no components or connections underneath the base of the unit are damaged while doing so.</p>
	<p>Step 3.</p> <p>Slide profiles into each other.</p> <p>Be careful to guide the rivet nut into the profile.</p>
	<p>Step 4.</p> <p>Slide square profiles into each other.</p>
	<p>Step 5.</p> <p>Place end cover on profile end.</p>
	<p>Step 6.</p> <p>Mount handle on glass door.</p>

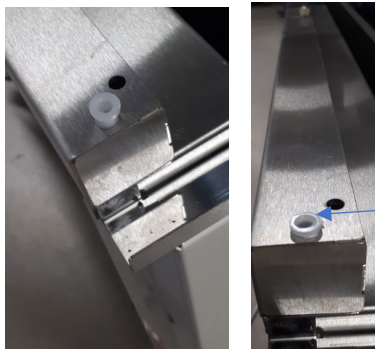

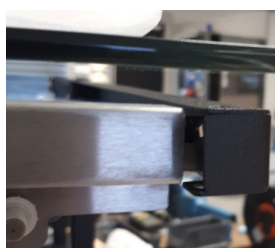

6.0 Installation Front door section (first version)

	<p>Step 7.</p> <p>Make sure to use place the white nylon rings on both side of the glass.</p>
	<p>Step 8.</p> <p>Bolt</p> <p>Washer (steel)</p> <p>Nylon washer with collar 1 </p> <p>Glass</p> <p>Nylon washer with collar 2 </p>
	<p>Step 9.</p> <p>Place hinge on glass door. One on the bottom, one on top.</p> <p>  (Hight adjustment washer 3701241 and 3701242)</p> <p>For placement washers wait till step 22</p>
	<p>Step 10.</p> <p>Place glass between nylon sheets Glass position</p>
	<p>Step 11.</p> <p>Remove side glass (both sides)</p> <p>CAUTION: Once past the top guide, the glass pane might fall if not properly held</p>
	<p>Step 12.</p> <p>Remove side glass holder, depending on version.</p> 

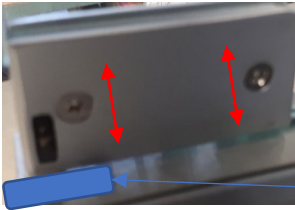

6.0 Installation Front door section (first version)

	<p>Step 13.</p> <p>Remove white stud.</p> <p>Remove top column cover (two screws)</p>
	<p>Optional Step 14. (only necessary when top column is stuck)</p> <p>Remove back cover(s) left and right (sliding door stopper).</p> <p>Both fixed with three screws.</p>
	<p>Step 15.</p> <p>Place new (longer) top column cover (two screws)</p> <p>Re-mount side glass holder. (the first screw)</p> <p>Mount second screw just before back column</p> <p>Replace white stud removed in step 13.</p>
	<p>Step 16.</p> <p>Remove screws (3x) to detach child guard from the bottom (recycle these screws to fix the bottom support!)</p>  <p>Dispose of the child guard in accordance with local regulations</p>

6.0 Installation Front door section (first version)

	<p>Step 17.</p> <p>Place square profiles (prepared in step 4) in previous position from child glass.</p> <p>Use same screws to mount.</p> <p>Place nylon bearing in profile (packet in bag with hinge).</p>
	<p>Step 18.</p> <p>Place bumper rubber in bottom profile (two).</p>
	<p>Step 19.</p> <p>Place top profile set (step 3) in top column cover.</p>
	<p>Step 20.</p> <p>Place additional white stud on top of top column cover</p> <p>Place nylon bearing in top column cover from below.</p>
	<p>Step 21.</p> <p>Put glass door in place.</p>
<p>Very carefully, try to close the glass door(s). They are not adjusted in height yet,</p>	

6.0 Installation Front door section (first version)

<p>so they can scratch the bottom plate.</p>	
<p>Very carefully, try to close the glass door(s).</p> <p>They are not adjusted in height yet, so they can scratch the bottom plate.</p>	
<p>Always place hight adjustment nylon washer first before placing the bottom hinge pin in its bearing</p> 	<p>Step 22.</p> <p>Adjust glass door height by adjusting position in the hinge (place in step 9).</p> <p>Also available in kit, 3701241 and 3701242 Height adjustment nylon washer set. See step 9.</p>  <p>Height adjustment is done by repositioning the hinge on the glass, or adding the height adjustment washer(s).</p>

6.1 Installation Front door section (Second version)

9124721 Service Instruction Installation front doors MCC (2nd version)

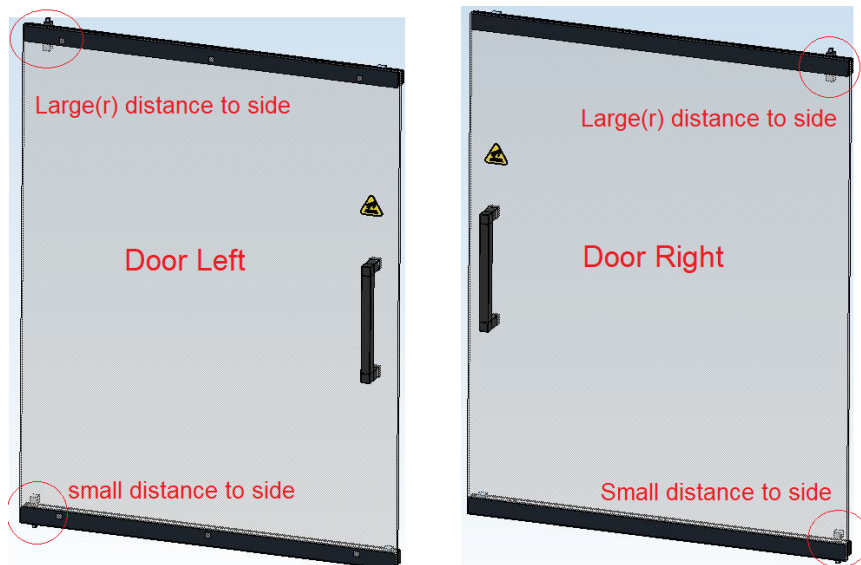

The technician, working on the unit will be fully responsible for abiding the locally prevailing safety rules and regulations.

Technical activities must be performed by qualified and authorized persons only.

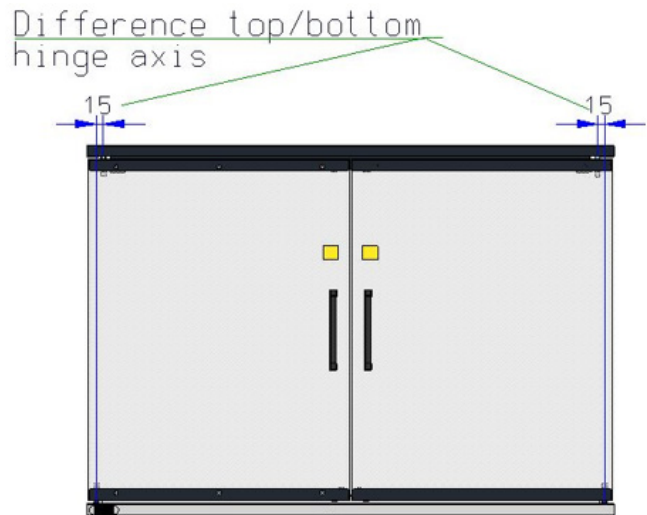

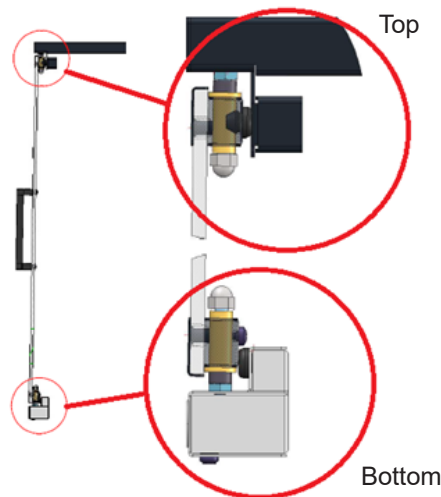

Before working on any electrical part, or dismantling the unit by means of using a screwdriver or any other tool, **ALWAYS REMOVE THE POWER PLUG** from the main outlet.

6.1 Installation Front door section (Second version)

6.1 Installation Front door section (Second version)

Depending on variant:

With standard under frame:

Remove front under frame panel (two screws, one on each bottom corner).

Drop-In:

Raise the unit at least 30cm from tabletop level in order to access the screws for the child-guard. Be careful to support the unit such that no components or connections underneath the base of the unit are damaged while doing so.

Step 1.

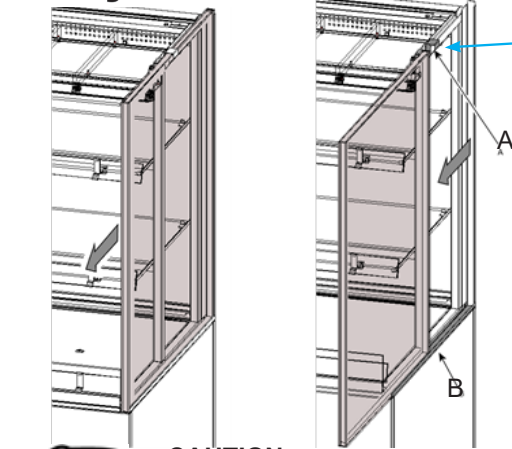

Remove Child guard:

Refer service manual chapter replacement and adjustment

- Remove front panel.
- Loosen mounting screws (3x depending on unit length) of child guard. *Screwed from underneath.*
- Remove Child guard
- Position under beam on place of child guard
- Fasten mounting screws.

6.1 Installation Front door section (Second version)

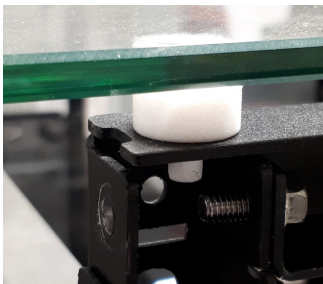

CAUTION:

Once past the top guide, the glass pane might fall if not properly held.
Hence do not leave it standing upright without being supported by both guide rails or holding it.

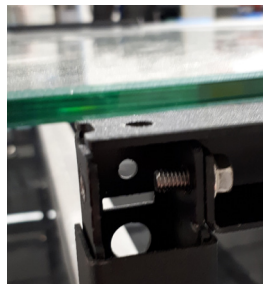

Step 2.

- Remove side glass** both sides:
- Slide the double glass pane towards the front along the top (A) and bottom (B) guiding rails.
- The side pane can be removed from the unit once it has slid entirely past the top guide.

HOT

COLD

Step 3.

- Remove white (or black) stud**, both sides.
(Black stud is screwed in)

Step 4.

- Remove top air guide or assy. air box**
(which is applicable depending on version).

Step 5.

- Remove side glass holder**, left and right.

Step 6.

- Remove or loosen back cover(s)** left and right (sliding door stopper).

Both fixed with three screws.

screws

6.1 Installation Front door section (Second version)

Step 7.

- a. **Remove top column cover** by removing last screw. (one each side)

Step 8.

- a. **Place new (longer) top column cover(s)/ window support** (two screws).
- b. Mount screws in new top column cover

Step 9.

- a. **Replace white (or black) stud** removed earlier.

Step 10.

- a. **Replace side glass holder** removed earlier.

Step 11.

- a. **Place top front beam** in side profiles.
Slide the beam into the front of the profile.

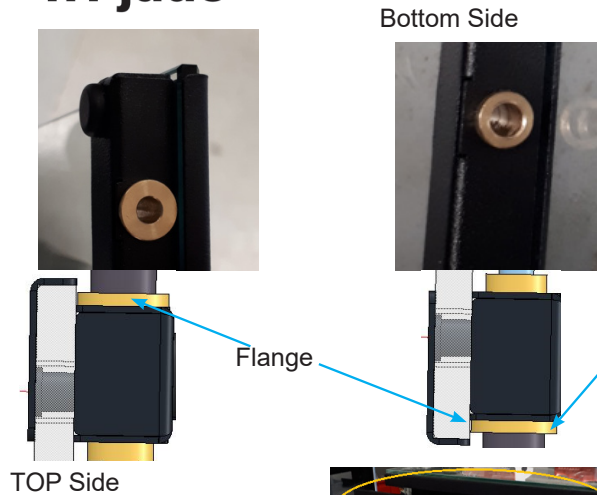

Step 12.

- a. **Fasten the top front beam** in side profiles with screws. (both sides)

View from underneath

6.1 Installation Front door section (Second version)

Step 13.

- Check placing bearing(s) in door, one in the top, one at the bottom.

Make sure the flange of the bearing sits opposite of the glass.

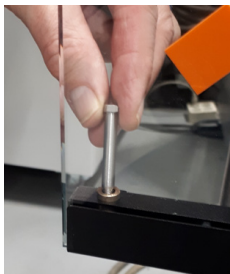

Step 14.

- Place a door on the lower beam, let it stick out of the unit.

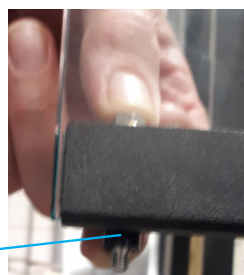

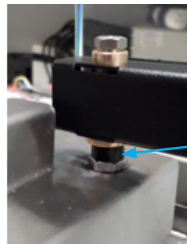

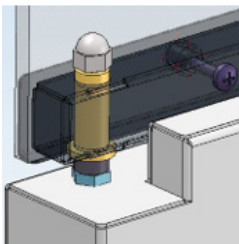

CAUTION:

Be careful not to touch the top beam with the glass door.

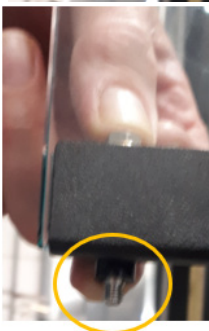

Step 15.

- Place hinge pin into bearing

Step 16.

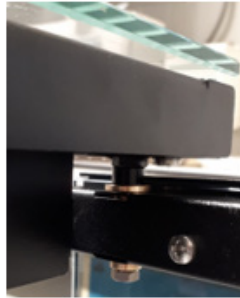

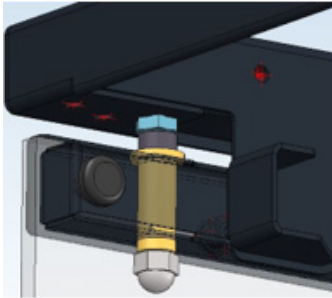

- Place distance ring on hinge pin.

Step 17.

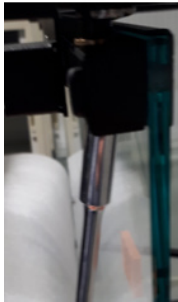

- Fasten hinge pin loosely, making sure the door is kept in place

6.1 Installation Front door section (Second version)

Step 18.

- Place top hinge pin into top bearing.
- Place distance ring on top hinge pin.
- Fasten top hinge pin, tighten tight !

Step 19.

- Fasten lower hinge pin, tighten tight !

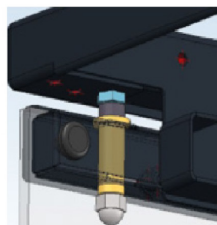

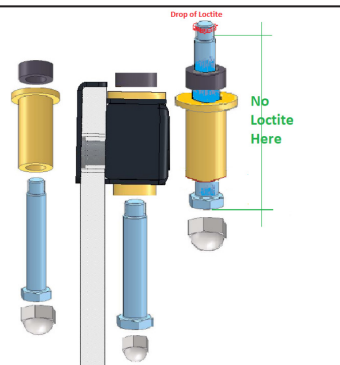

Step 20.

Repeat step 14 till 19 for each front door, depending on MCC variation.

Replace removed sliding doors covers in reverse order.

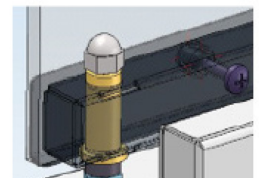

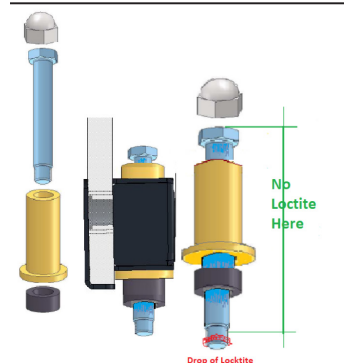

Replace top air guide or assy air box, in reverse order. If this does not fit anymore please order:

7.0 Operation MCC Hot

7.0 Hot Units

The display value is not the product temperature!

When switched on, the display performs a lamp test; the display and LED's will flash for several seconds to check all function are working correctly.

7.0.1 Control Panel

On/Off Switches (hot unit).

Heating

Lighting

Key Function			
	Press and hold at power up: FACTORY RESET ("FAC" is displayed)		Press for one second: UP
			Press for one second: DOWN
	Press for one second: BACK Press and hold: PULL-DOWN		Press for one second: TEMPERATURE SETPOINT/OK
			Press and hold: MENU
Display Icons			
	Night mode (Energy saving)		
		Fan running	
		Active alarm	
		Unit (°C or °F)	

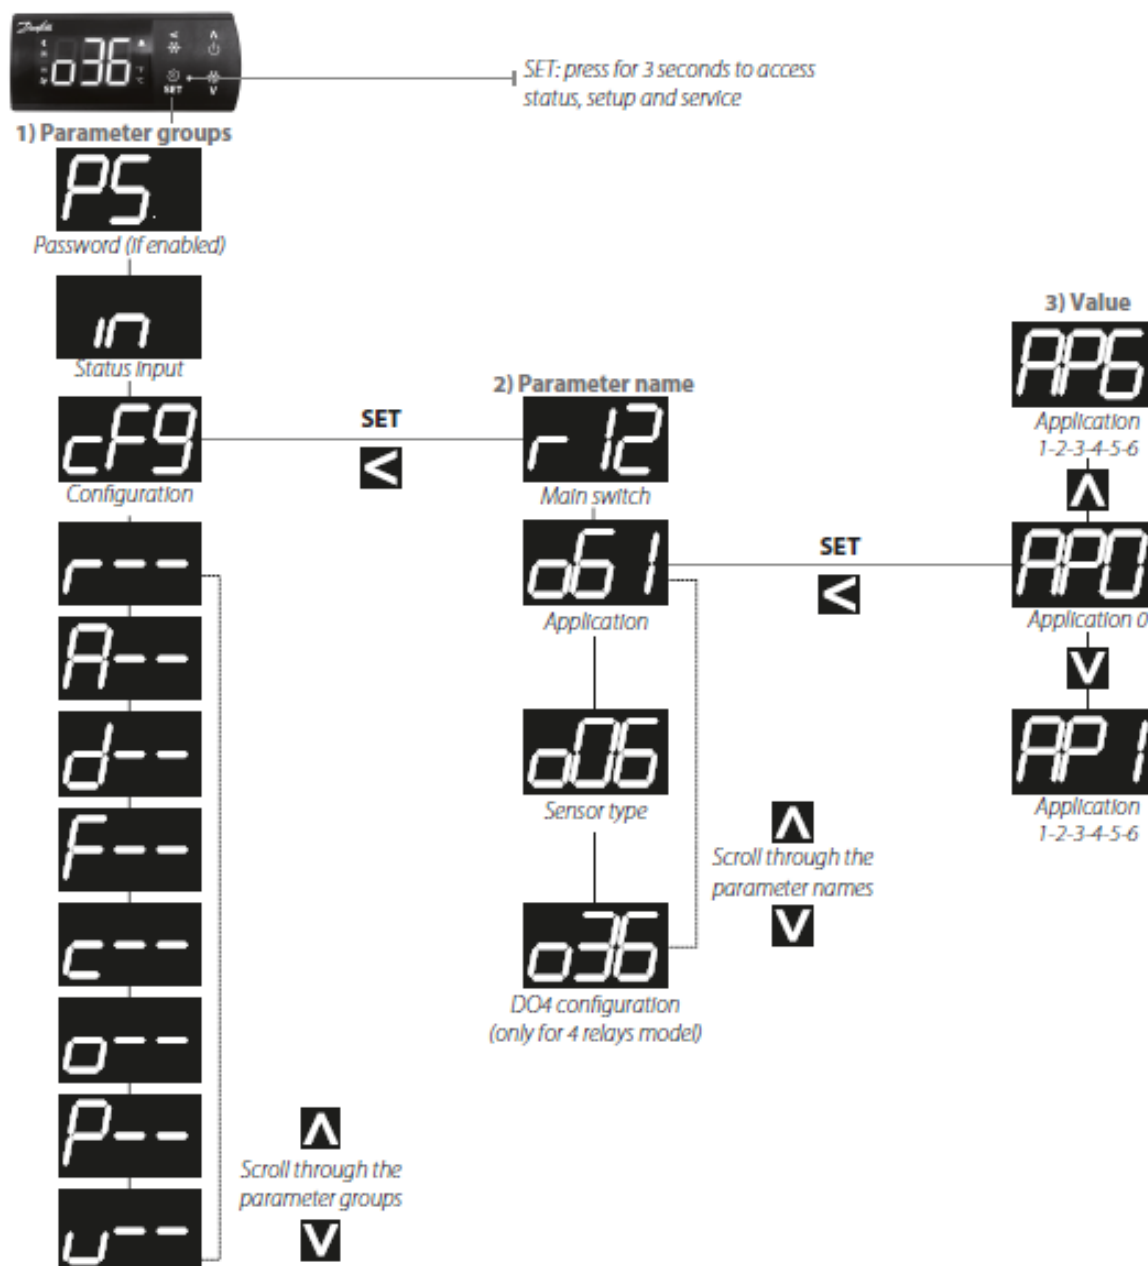

7.0.2 Factory settings

The unit is set at 65 °C (149 °F) air temperature.
If required this temperature can be adjusted to some degree.

At a ambient temperature of 20 °C (68 °F) and an initial core temperature of 85 °C (185 °F) the factory settings of the unit's temperature ensure a constant core temperature of at least 63 °C (145.5 °F) for 4 hours.

7.1 Operation MCC Hot <access controller>

7.1.0 Menu Structure

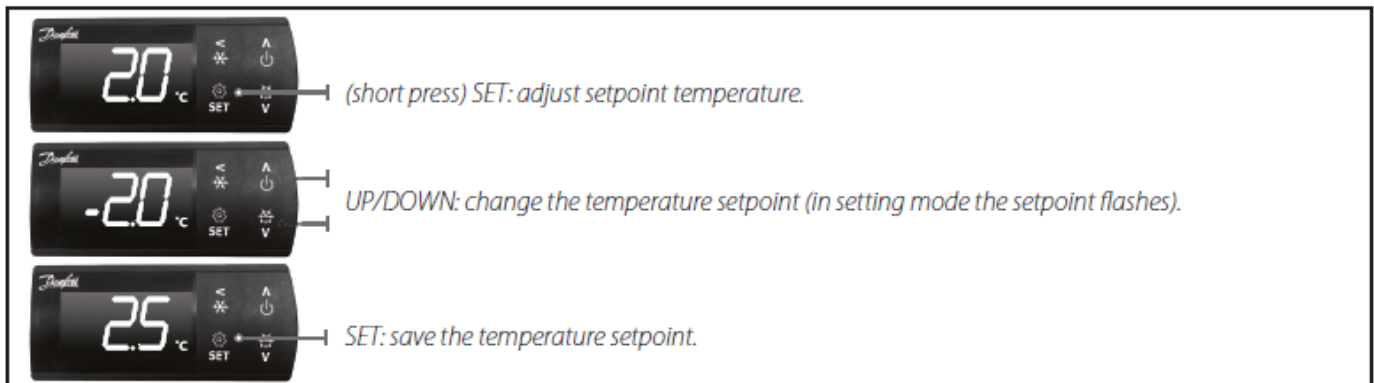

Quick Configuration via “cFg” menu

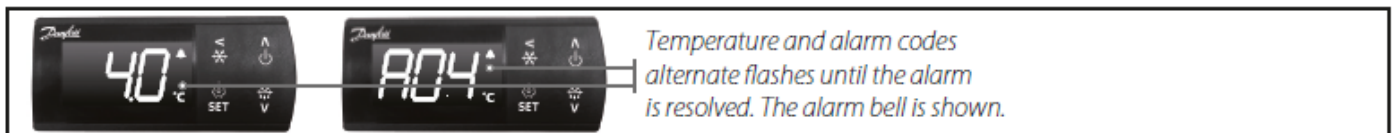

- Press SET for three seconds to access the parameters groups.
- Select “cFg” menu and press SET to enter. The first menu “r12” (main switch) is displayed.
- Switch OFF main switch (r12=0) for changing the pre-installed application.
- Press UP/DOWN to scroll through the parameter list.
- Configure the “o61” parameter to select a pre-installed application:
- Press SET to access the “o61” parameter.
- Press UP/DOWN to select an application.
- Press SET to confirm, “o61” is displayed.
- Continue to set the next parameters in the “cFg” menu.

7.2 Operation <access controller>

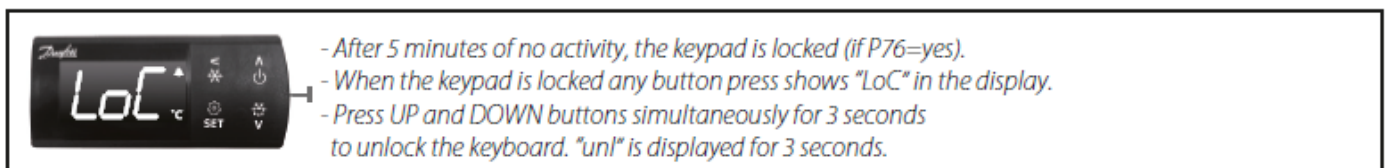

Adjust set point temperature

View active alarm

Unlock keyboard

7.2.0 Switching-on the unit

- Switch the unit on, by means of the main switch (located top front, and/or top back)
- Switch on controller for specified shelf (Multi-temp only)
- Preheat the unit/shelf for at least 30 minutes.
- Switch on the lighting with appropriate switch (next to controller)

7.2.1 Loading the unit

- Only place products that have a core temperature of at least 85 °C (185 °F) or above.
- Only with packaged hot products in bags or containers that are suitable for this purpose, withstanding these temperatures.
- To ensure a good contact with the heated trays, only place a single layer of products.
- The maximum carrying-capacity per shelf is 30 kg/m (66 lbs/m), by equal load.

8.0 Service instruction controller replacement

9124747 Service Instruction Controller replacement

Due to supply issues, Fri-Jado uses different kind of controllers as placed in our units from factory.

Four possible controllers are used.

For Service replacements we only deliver Eliwell ICPlus 902

Please find below the difference in connections and parameters.

For disassembly instructions refer to the original service manual for the unit at hand.

**Service
Replacement-

9.0 Maintenance

CLEANING AND MAINTENANCE

WARNING

Never use a water hose for cleaning.
Water can seep into the unit through the ventilation holes of the unit.

Because of hygiene aspects and optimum condition of the unit it is of up most importance to keep a daily cleaning pattern from first use onwards.

Maintenance schedule for users

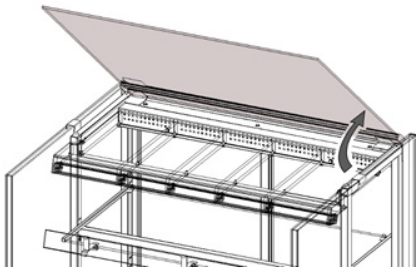

Item	Action	Frequency
Inside	Clean	Daily
Glass Panes	Clean	Weekly
Outside	Clean Use Stainless Steel cleaning spray to remove stains, and restoring the gloss.	Weekly
Condenser	Clean	Monthly

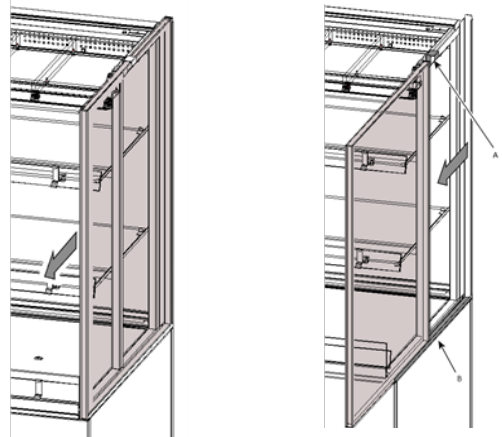

For detailed cleaning instructions refer to User manual chapter 5

Examples:

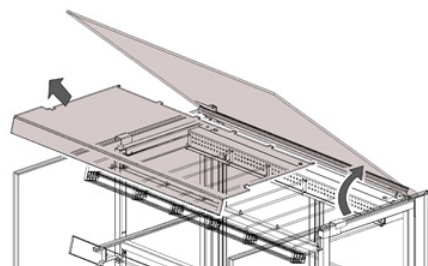

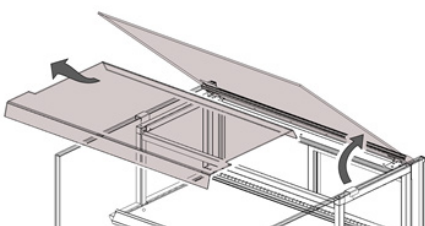

Cleaning possibility the top glass pane all units

Cleaning possibility side pane all units

Cleaning possibility off the top air guides

10.0 Trouble Shooting

10.0.0 Problems which can be checked by user

Each user can check the following points as mentioned in the user manual:

- Is the power supply OK?
- Check the fuses and the earth leakage switch in the meter cup board.
- Are all the switches in the correct “on” position?

Item	Malfunction	Possible action
Unit	Unit does not work	<ul style="list-style-type: none"> • Check the power supply. • Are all switches in the correct position.
Unit	Display shows error code	<ul style="list-style-type: none"> • Contact your supplier or service agency.
Lamp	Does not light up	<ul style="list-style-type: none"> • Switch ON.
Mains cord	Damaged	<ul style="list-style-type: none"> • Replace.
Window	Damaged	<ul style="list-style-type: none"> • Replace.

10.0.1 Cold units

WARNING

All service operations on the refrigeration system and gas charging must be performed by fully certified and qualified persons, in a well ventilated environment.

10.0.2 Replace the mains cord

WARNING

Hazardous electrical voltage.

If the mains cord is damaged, it must be replaced by a fully certified and qualified person, in order to avoid hazards.

10.0.3 Error codes and solutions

See page 69

10.0.4 Heating element testing (Self Serve units)

Resistance

1. Remove wiring (two) from the element.
2. Connect the probe of the multimeter to each of the wires.
3. Test the probe with a Ohm tester, values see below.

Current

1. Place ampere pliers around red wire of Element.
2. In normal working condition, test current see below. (230V version)

		MCC60			MCC90			MCC120	
Shelf	Power	Current	Resistance	Power	Current	Resistance	Power	Current	Resistance
	Watt	Ampere	Ohm	Watt	Ampere	Ohm	Watt	Ampere	Ohm
Top	465	2,02	113,7	700	3,04	75,6	935	4,07	56,6
Middle	570	2,48	92,8	850	3,70	62,2	1130	4,91	46,8
Bottom	750	3,26	70,5	1125	4,89	47,0	1500	6,52	35,3

10.0 Trouble Shooting

10.0.5 Heating element testing (Full Serve units)

Resistance

1. Remove wiring (two) from the element.
2. Connect the probe of the multimeter to each of the wires.
3. Test the probe with a Ohm tester, values see below.

Current

1. Place ampere pliers around red wire of Element.
2. In normal working condition, test current see below. (230V version)

		MCC60				MCC90				MCC120		
Shelf	Power	Current	Resistance	Power	Current	Resistance	Power	Current	Resistance	Power	Current	Resistance
	<i>Watt</i>	<i>Ampere</i>	<i>Ohm</i>	<i>Watt</i>	<i>Ampere</i>	<i>Ohm</i>	<i>Watt</i>	<i>Ampere</i>	<i>Ohm</i>	<i>Watt</i>	<i>Ampere</i>	<i>Ohm</i>
	1500	6,5	35,25	1800	7,8	29,3	2400	10,5	22			

10.0.6 PTC sensor testing (Hot Unit)

1. Remove wiring from the sensor.
2. Connect a temperature tester to the probe of the sensor for comparison.
3. Test the probe with a Ohm tester.

Nominal resistance	1000 ohm at 0 °C
Measuring accuracy	Class B
Temperature range	-40 – 100 °C
Cable material	PVC, 2 x 0.22 mm ²
Sensor tube	18/8 stainless steel
Time constant	15 seconds
Enclosure	IP67
AMP-Plug (selected sensors only)	AMP ital mod 2, housing 280 358, Crimp contact 280 708-2

R (Typ.) [Ohm]	Temp. [°C]	Temp. [°F]
1117	30	86
1078	20	68
1039	10	50
1000	0	32
961	-10	14
922	-20	-4
882	-30	-22

10.0 Trouble Shooting

10.0.7 Alarm codes <hot units>

Alarm Code

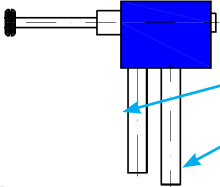

Alarm status	Alarm Code
Air temperature sensor (Sair) error	E29
Defrost sensor (S5) error	E27
Condenser sensor (Sc) error	E30
High temperature alarm	A01
Low temperature alarm	A02
High voltage alarm	A99
Low voltage alarm	AA1
High condenser temperature alarm	A61
Door alarm	A04
Standby alarm	A45
DI external alarm	A15

11.0 Trouble Shooting Symptoms and causes

Symptom	Possible causes
No power	<ol style="list-style-type: none"> 1. Main circuit breaker open 2. Fuse Blown 3. Loose wire connection
Main fuse or breaker blown	<ol style="list-style-type: none"> 1. Wiring incorrectly 2. Short circuit heating element 3. Short circuit fan element 4. Short circuit wiring
Illumination does not work	<ol style="list-style-type: none"> 1. Led malfunction 2. Tumble switch malfunction 3. Led driver malfunction 4. Loose / short circuit wiring connection
No heating	<ol style="list-style-type: none"> 1. Heating element malfunction 2. Relay malfunction 3. Loose wiring connection 4. Thermostat malfunction 5. Loos wiring connection 6. Air flow not functioning
Unit does not reach desired temperature	<ol style="list-style-type: none"> 1. Heating element malfunction (HOT unit only) 2. Strong air current along unit / Draft 3. Burned contact on contactor 4. Sensor malfunction 5. Sliding doors not closed
No indication on controller	<ol style="list-style-type: none"> 1. Electronic controller malfunction 2. Blown fuse 3. Loose wiring connection
No air flow inside unit	<ol style="list-style-type: none"> 1. Fans do not work 2. Blown fuse 3. Loose wiring connection 4. 24Vdc power supply malfunction
Products dry out (Hot FS only)	<ol style="list-style-type: none"> 1. No water intake / Not filled by hand 2. No water intake, supply not open 3. No water intake, inlet valve blocked, or defective 4. No water, or too much water, Water level sensor

11.1 Trouble Shooting Analytical description

Description of part	Symptoms	Possible causes	Solution / Action
Contactor	Contactor does not work	Wiring Coil malfunction Contact burned	Check wiring Check resistance of coil +/- 525Ω Check the contacts Replace contactor
Heating element (HOT unit)	Unit is not reaching the set temperature	Wiring Element malfunction Air flow not Working, Fan's not turning	Check wiring Check power on elements per shelf Check current with AC current tester Check Resistance (refer 6.4) Replace element Check wiring Check power on fans per shelf Replace Air box / Power Supply
Tumble switch	Light, heating or cooling does not switch on	Wiring Contact burned	Check wiring Check the voltage on "in" and "output"
LED	Light does not turn on	Wiring LED broken Led driver defect	Check Wiring Replace LED Replace LED driver
Electronic thermostat	Display does not light up The unit is not reaching the set temperature	Wiring Loose sensor Thermostat Malfunction Thermostat setting	Check wiring Check sensor Replace thermostat Check parameters

PTC 1000 sensor (Hot Unit)	<p>The unit is not reaching the set temperature or does not heat up at all</p> <p>The unit becomes too hot</p>	<p>Broken Sensor</p> <p>Loose sensor</p> <p>Broken Sensor</p> <p>Loose sensor</p>	<p>Replace sensor</p> <p>Check sensor wiring</p> <p>Replace sensor</p> <p>Check sensor wiring</p>
Water intake (Hot FS only)	<p>Not filling of Humidification tray</p> 	<p>Water supply closed</p> <p>Inlet Valve</p> <p>Contaminated of water level sensor</p>	<p>Open water supply</p> <p>Check, clean or replace</p> <p>Clean or replace</p>

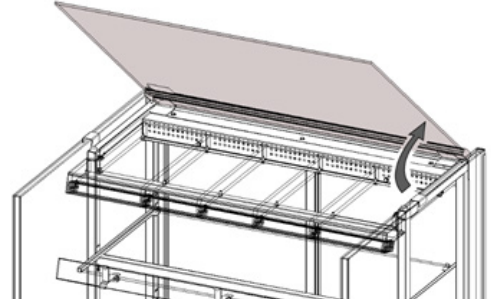

12.0 Replacement and Adjustments

12.1 Top glass replacement

1. For replacement, open top glass pane entirely.

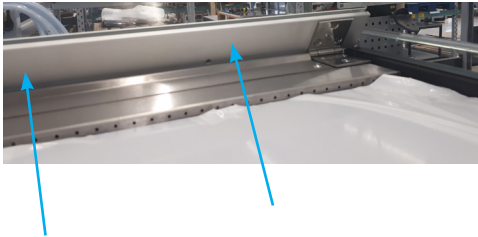

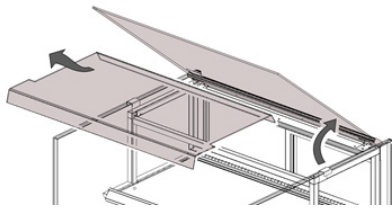

Be aware of the weight of the glass.

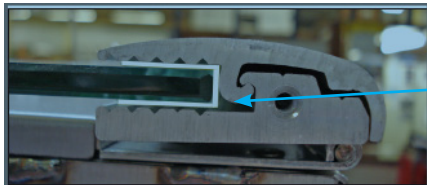

2. Remove the air guide (for the hot version) or the air box (for the cold version) by simply lifting them out.

HOT

3. Loosen the adjusting screws which secure the glass with a torques key TX15
Depending on the length of the unit, there are 4, 6 or 8 screws.

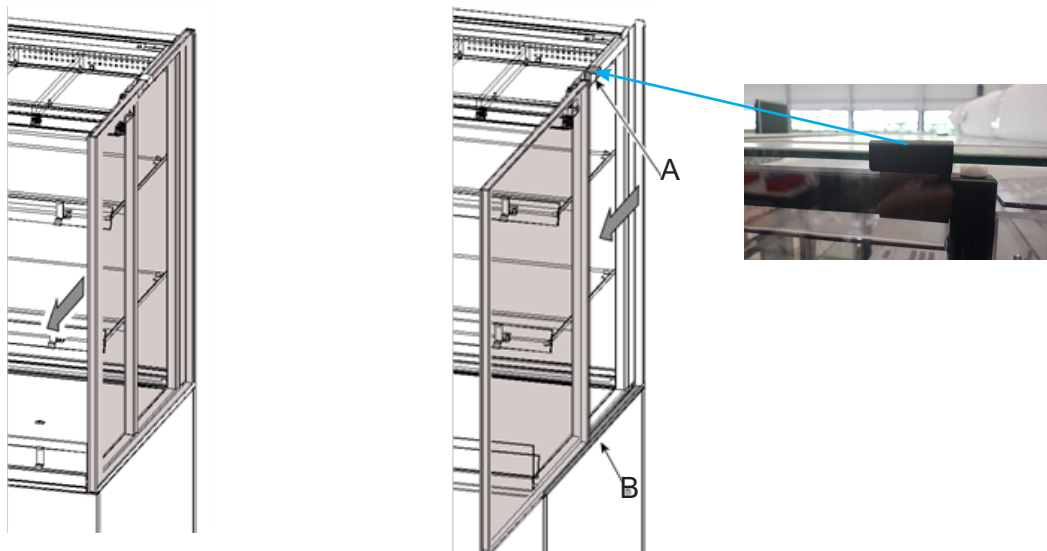

4. When refitting the glass, make sure the silicon protection profile is on.

12.2. Side glass replacement

The side pane glass of the units can easily be replaced.

1. Slide the double glass pane towards the front along the top (A) and bottom (B) guiding rails.
The side pane can be removed from the unit once it has slid entirely past the top guide.

CAUTION:

Once past the top guide, the glass pane might fall if not properly held.

Hence do not leave it standing upright without being supported by both guide rails or holding it.

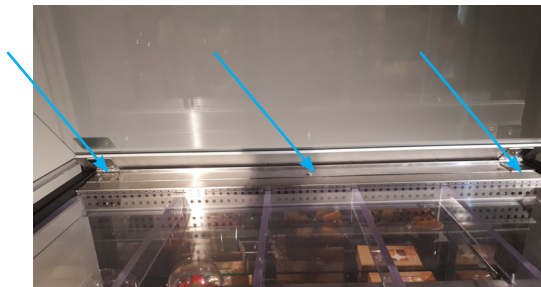

2. Before placing a new side pane, clean the guiding rails. (Top, back and bottom)
3. Before sliding the new pane into the rails, ensure the transparent sides of the pane are facing forwards and up.
4. Slide it all the way back till the front of the pane is in line with the front plating.

12.3 Sliding door Replacement (First version (magnets in rails))

(Two different versions, please select appropriate type)

In order to replace the sliding doors, take following step:

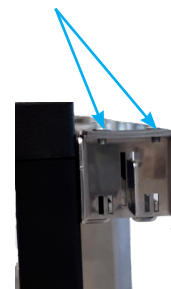

1. Remove Sliding door stopper (three screws). Left and right side.
2. Remove rail cover, loosen mounting screws and pull cover backwards.

Screws

3. Remove rail stopper (two screws on top).
4. Remove sliding door(s).

5. Replace in reverse order.

12.4.1 Sliding door Replacement (Second version, magnets in door)

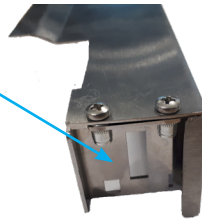

(Two different versions, please select appropriate type)

Recognizable: Two screws on top of rail cover. Top back side, two left and two right.

In order to replace the sliding doors, take following step:

1. Remove Sliding door stopper (three screws). Left and right side.
2. Remove Rail cover, four screws, on top of rails two left and two right.
3. Remove rail stopper
4. Remove sliding door(s).
5. Replace in reverse order.

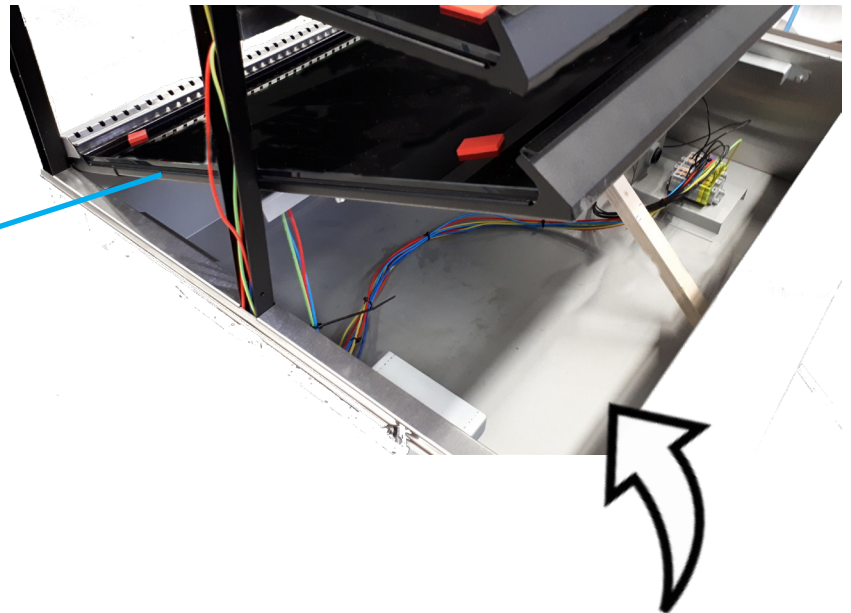

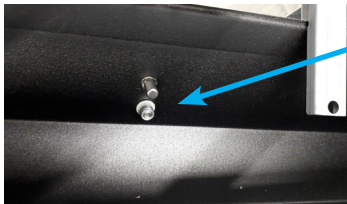

12.5 Sensor Replacement (Hot Unit)

1. Remove the brackets (two pieces, one left, one right). One Screw each.

2. Lift bottom shelf at the front. It is turnable.
3. Sensor is located at the back.
4. Sensor is screwed from the outside in.

5. Remove glass pane from lowest shelf.
6. Remove fan box.
7. Unscrew the sensor holding plate.
8. Click sensor out of mounting bracket.
9. Place new sensor, put wiring in the same location as the old wiring.

12.6 Child glass replacement

1. Remove front panel
2. Loosen mounting screws (3x) of child glass.
Screwed from underneath
3. Place new child glass.
4. Mount in reverse order.

Mounting screws

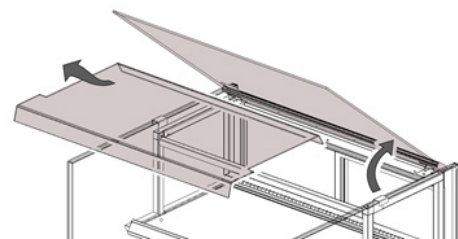

12.7 MCC Air guide replacement

1. Air guide replacement
2. For replacement, open top glass pane entirely.

Be aware of the weight of the glass.

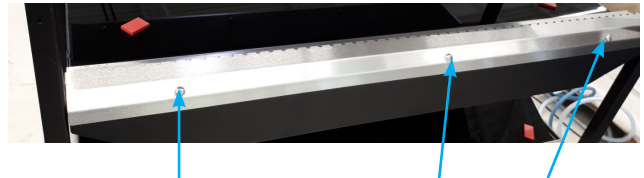

3. Remove the air guide by simply lifting them out.

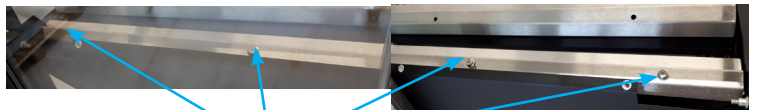

12.8 Fan box replacement (MCC Hot)

1. Remove air box cover (3 screws).

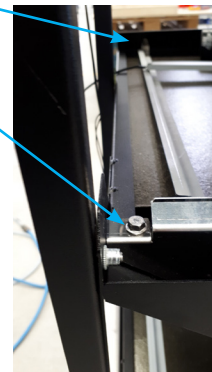

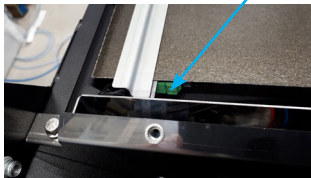

2. Remove glass pane clamp.
(4 or more bolts depending on unit length)

3. Remove Glass pane

4. Remove air box (1 connector, two screws).

5. Replace in reverse order.

Note:

If replacement has to take place on a solid back unit, the back panel assembly must be removed before accessing the air box screws mentioned in step 1

12.9 Replacement of shelf glass pane

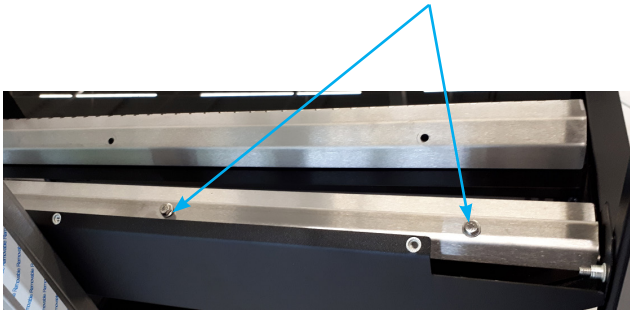

Each shelf is covered with a tempered glass pane.
To replace follow steps below:

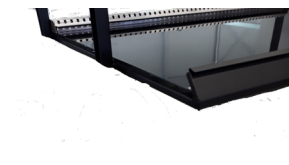

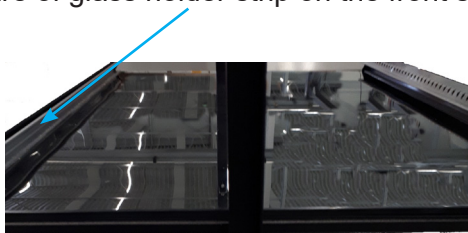

1. Remove air outlet cover by removing the screws (depending on length three or more screws)

2. Remove glass mounting profile by removing the screws (depending on length three or more screws)

3. Lift out glass pane, starting lifting from the back. (Take care of glass holder strip on the front side of the glass)

4. Take new glass pane, place front glass holder strip and place pane into position.

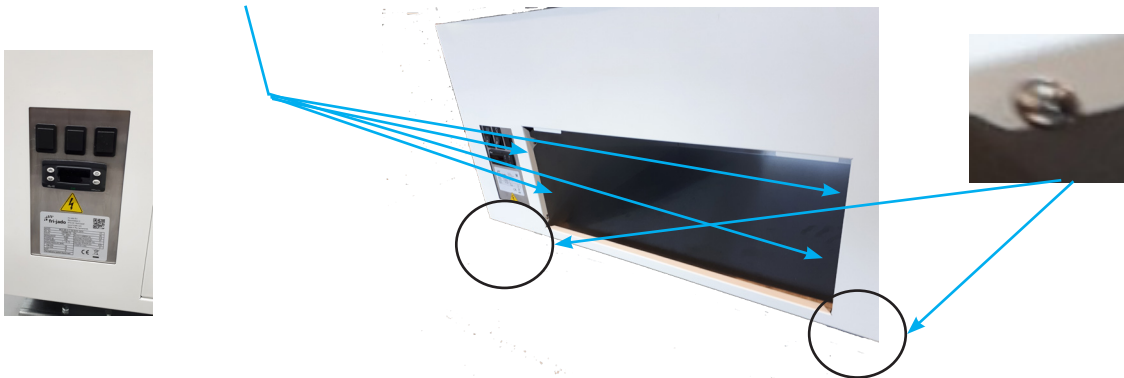

12.10 Opening Electrical box

Depending on the MCC version the electric box is placed at the back or in the front of the unit. For drop in versions the box can be placed anywhere in the build in counter.

First remove the panel (back or front depending on version)
Panel is fixed with two screws underneath the unit. Loosen those.

In some versions you also need to loosen the screws on the side of the under storage compartment.

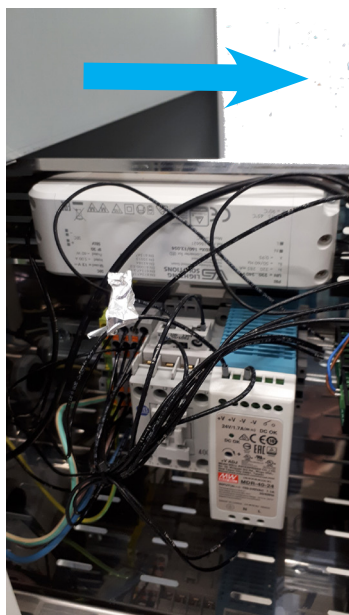

After loosening the screws, you can remove the panel by pulling it slightly down and then turning it towards you.

Two lips on the top of the panel, keep the panel in place.

Depending on the version you find one
Screw on top of the electrical box,
or two screws, underneath the pull
out handle from the box.

Remove those screws.

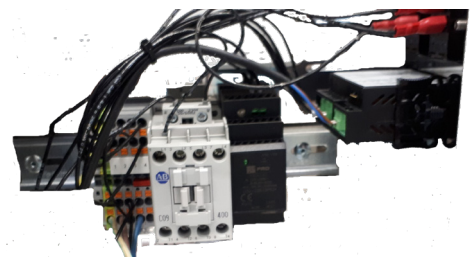

Now you can pull the box toward you.
The box will slide in its rails

Normal version (24V psu)

Special version (15V psu)
See serial number remarks in
parts section

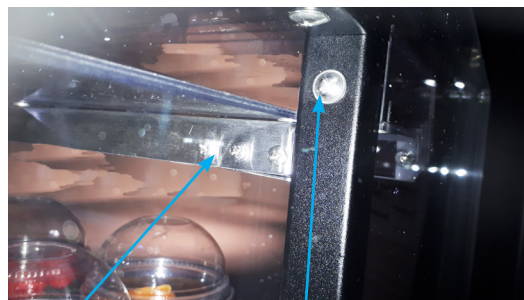

12.11 Led light Replacement

All LED Lights are mounted in the same way.

1. Remove side glass panes.
2. Remove column cover.
(two screws, one on top backside and one at the bottom back side)
3. Pull off column cover.
4. Remove screw holding the LED housing .
5. Disconnect connector in Column, before you do so, make a note of the placing of the red and black cable in the connector.
6. Take LED light out of LED light holder, and place new LED.
7. Connect the wires from the new LED in the column, taking care of the notes you made regarding the red and black cable.

Column screw (top)

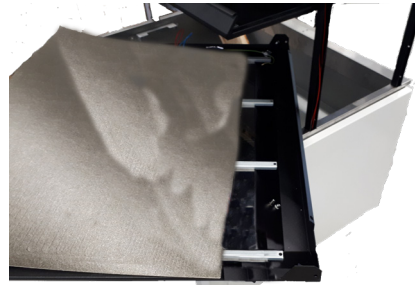

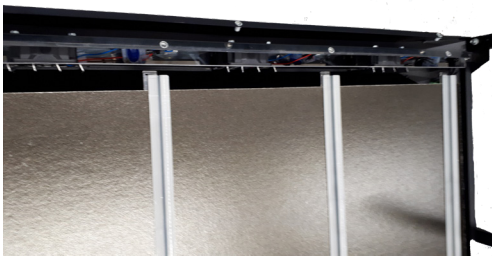

12.12 Heating element replacement

1. Remove Shelf Glass pane
2. Remove air box.
3. Remove side glass.
4. Remove column cover (middle left column cover, seen from back of unit).

5. Loosen Element holders, depending on the version the holders are twisted at the back side, or fastened with screws.

6. Take off the top element holders. Heating Element is now free to take out.

Make a note of the placement of the wiring.

7. Take out element.

If possible, follow the wires going down in the column.

If not, cut the wire in the column, leaving enough length to make a connection to the wires from the new element.

NEVER make a connection underneath the heating element

Connect the wires in the column using a wago connector like the one on this picture:

Take care of connecting:

Red to Red,
Blue to Blue, and
Yellow to Yellow.

12.13 Controller Replacement

1. Open Electric box.
2. Unscrew the brown and Blue wire (Make note of connection points)
3. Unscrew the four black wires. (Make note of number and connection position)
4. Using a flat screwdriver push out the controller to the front of the box
5. Place new controller, by pushing it in.
6. Connect wires again, to the marked positions (point 2 and 3)
7. Check all parameter settings according the parameter list.

12.14 Panel Replacement

1. Remove Plinths

Front panel

1. Remove front panel, by removing the holding screws (left and right bottom corner)

Bottom view

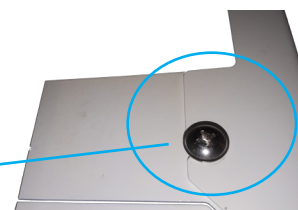

2. Pull panel slightly towards you and down, to remove.
3. Replace in reverse order

Back panel

1. Remove back panel, by removing the holding screws (left and right bottom corner)

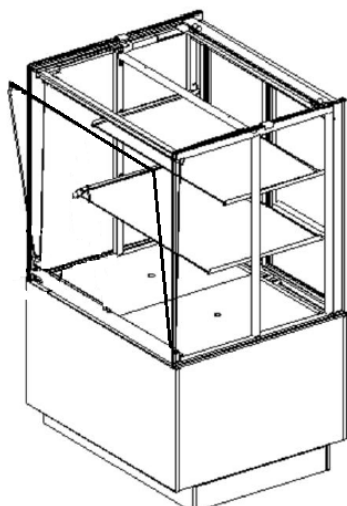

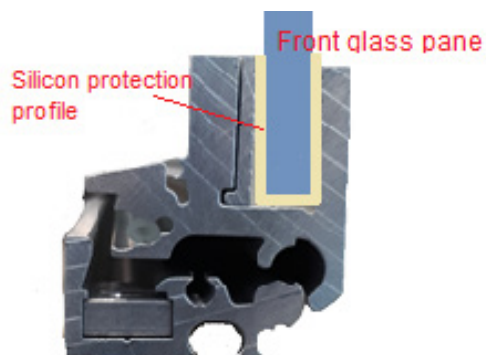

Bottom view

2. Pull panel slightly towards you and down, to remove.
3. Replace in reverse order

12-15 Front glass pane replacement (Full serve models)

1. Lift top glass to "unlock" the front glass
2. Slightly turn the front glass towards you
3. In the right tilted position, you can take glass pane including profile out.
4. Replace in reverse order.

12.1 Hot Full serve element replacement

For the MCC 60 Hot Full Serve a new heating element is implemented.

Don't place the old element type any more.

Number for this kit is:
9382269s

Heating element 1500W 230V (packed)

Article number	Description
2005828	Faston type G BU 6.3 WIRE 1.5/2.6
4302179	Bag 120x180mm
9124793	Instruction element replacement MCC 60
9382269	Heating Element 1500 Watt 230V
4280208	Screw M4x8 pan head
0169189	Nut M14 for heating element
0142307	Nut M4 hexagon DIN 934
0169197	Gasket Klingsil C4430
9191297	Drill 5,0mm for Stainless steel
30133806	Support heating element
9384611	Element bracket 60 right
9384612	element bracket 60 left
4311158	Box sleeve 500x100x100

Existing situation

New situation

Step 1. Remove power plug from wall outlet.

Step 2.

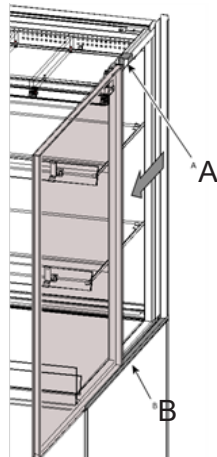

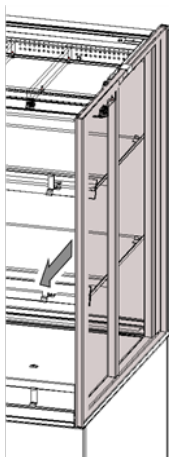

For easy access, please remove both side glasses.

Slide the double glass pane towards the front along the top (A) and bottom (B) guiding rails.

The side pane can be removed from the unit once it has slid entirely past the top guide.

Before sliding the glass pane back into the rails, ensure the transparent sides of the pane are facing forwards and up.

Slide it all the way back till the front of the pane is in line with the front plating.

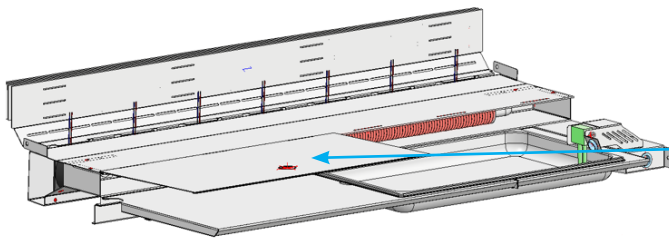

12.1 Hot Full serve element replacement

Step 3.

Remove bottom product plateau, both, left and right.

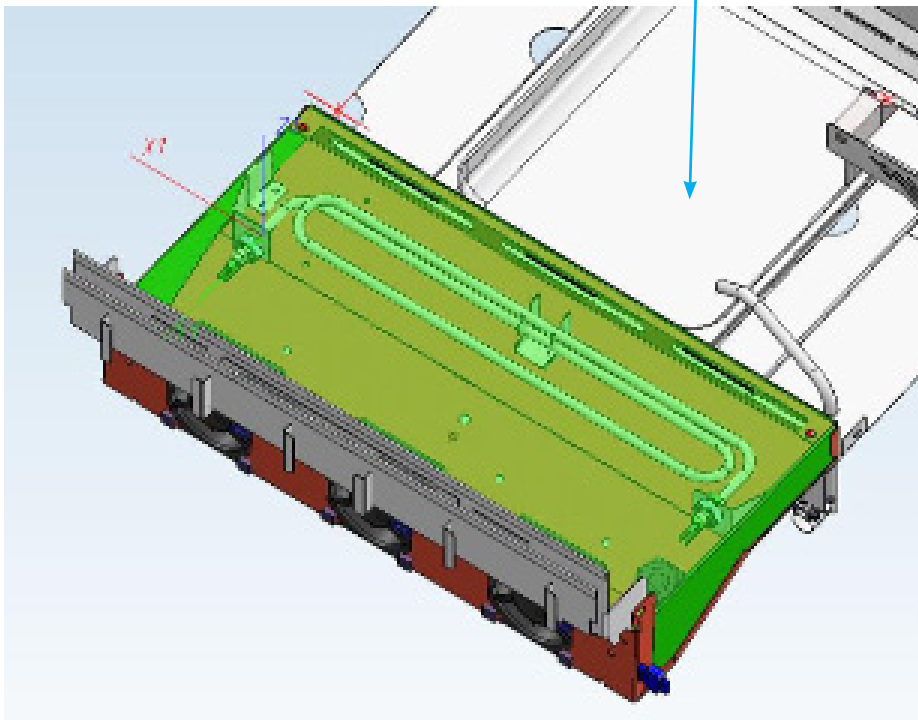

Step 4.

Remove cover deck, both left and right.

Step 5.

Remove GN pan, careful not to spill water.

Step 6,

Remove top cover from heating element box 4 bolts.

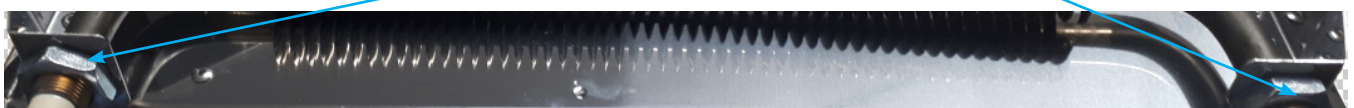

Step 7.

Remove wire connection from element by removing the nut.

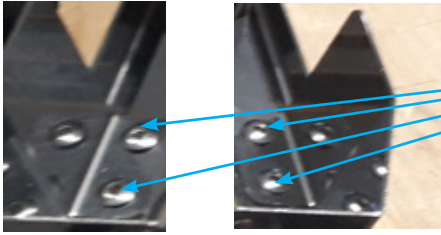

Step 8.

Remove old type heating element by removing the mounting nuts.

12.1 Hot Full serve element replacement

Step 9.

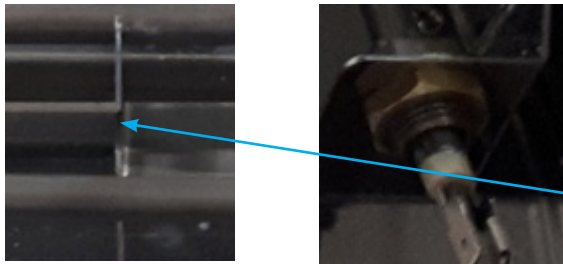

Remove rivet (4) by drilling them out, which are holding the heating element mounting brackets, both left and right.

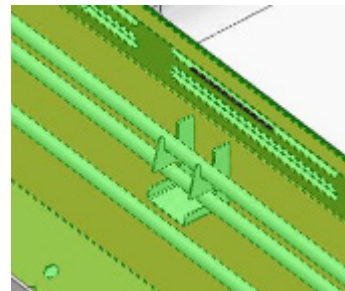

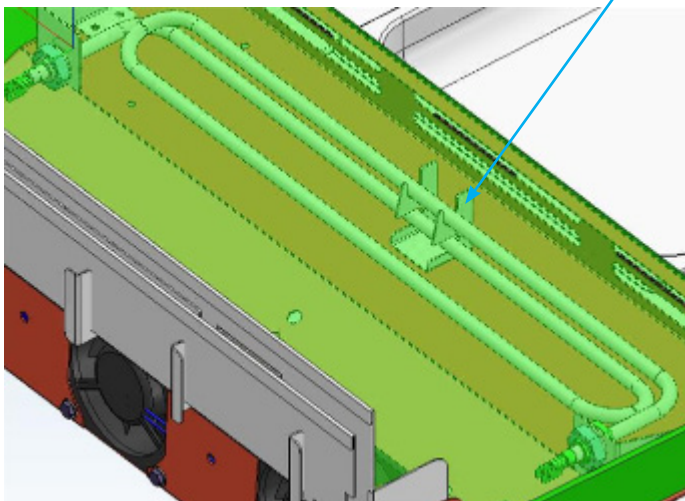

Step 10.

Place new heating element holding brackets, and mount these with the bolts and nuts, as delivered.

Step 11.

Place distance bracket on heating element (in the middle) and positioning the element in the new mounting holes.

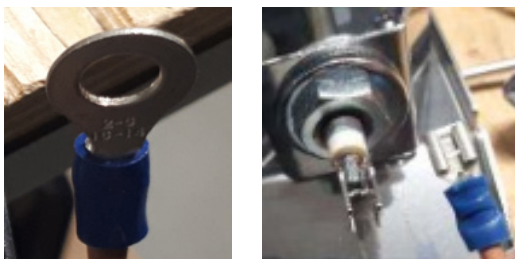

Step 12.

Mount the element in place using the delivered mounting nuts and gaskets. Tighten the nuts with wrench softly.

Step 13.

Cut fastons (ring type) from power wire and replace this by the newly delivered fastons (clamp type) perform this for both connections.

Step 14.

Connect power wires to the heating element with the newly connected fastons (clamp type)

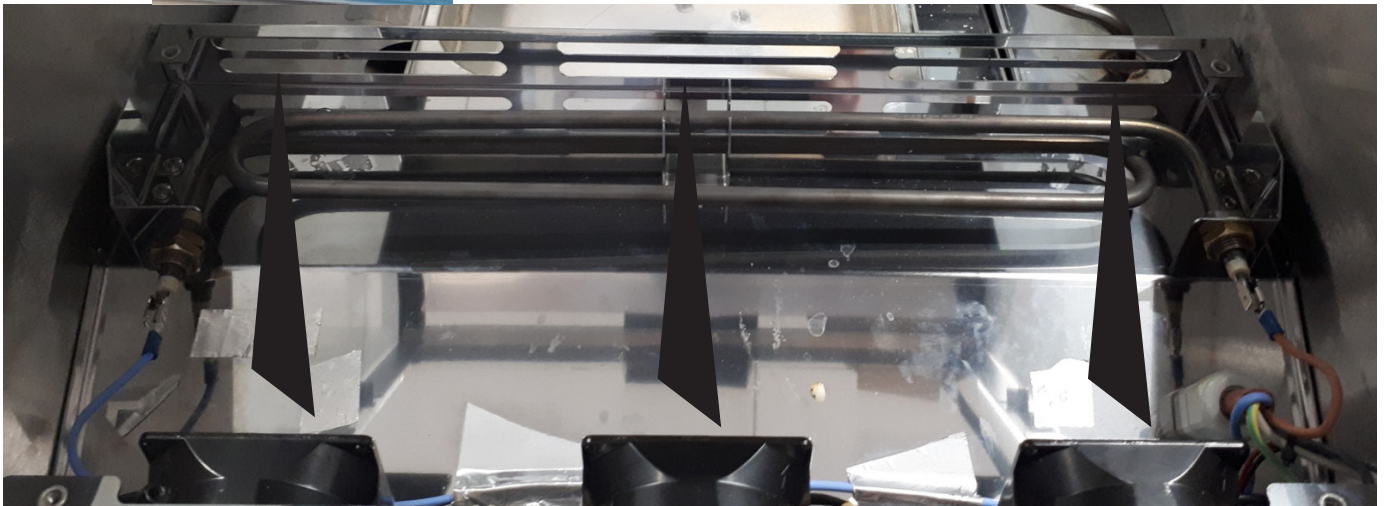

12.1 Hot Full serve element replacement

Make sure after placement, the power wire is not between the blowers and the element.

Airflow should not be interrupted by the wire.

Wire under airflow from blower !

Step 15.

Close heating element cover (removed in step 6).

Step 16.

Close unit by replacing all parts removed during the first 5 steps, in reverse order.

Step 17.

Put power cord in wall outlet and test unit.
